

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Recent activity

Built a SaaS crypto trading platform, developed embedded HID firmware and a Windows input driver, and iterated on AI/ML research projects including crypto prediction and computer vision for online poker.

Activity timeline (last 12 months)

2026 Jun

SaaS crypto trading platform — summit

Continued work on the AI-driven crypto trading platform, touching build infrastructure, authentication, and deployment tooling.

2026 May

ESP32-S3 HID firmware development — j-uni-hid

Iterated on feature-rich mouse and keyboard emulation firmware for the ESP32-S3, adding a new matrix variant and event emitting.

Windows input filter driver — input-driver

Developed a KMDF input filter and injection driver, adding push-style event delivery and integration tests.

2026 Apr

SaaS crypto trading platform — summit

Worked heavily on the trading platform, shipping features for outbound proxies, strategy templates, billing model changes, UI overhauls, and security hardening.

2026 Mar

SaaS crypto trading platform — summit

Built out features including an MCP server agent interface, LLM client integrations, and a WebSocket notification system for the trading platform.

On-device LLM assistant for Android — ozwil-android

Iterated on an Android LLM assistant, restructuring the sub-agent architecture, adding new offline models, and implementing wake-word processing.

E-ink note-taking launcher — blackboard-launcher

Built an Android launcher centered around note-taking for E-ink devices.

2026 Feb

SaaS crypto trading platform — summit

Continued development of the crypto trading platform.

Neovim IDE configuration — .dotfiles

Maintained a personal Neovim development environment setup.

2026 Jan

ESP32-S3 HID firmware development — j-uni-hid

Iterated on multiple firmware versions for the ESP32-S3, introducing BLE and USB touch support and performance profiles.

2025

AI coding assistant tooling — auto-claude

Worked on an autonomous multi-session AI coding tool, adding Git rules, task IDs, and squash-merge features.

Trading bot infrastructure — freqtrade-tg-multibot

Built and iterated on a Telegram-based multi-bot frontend for Freqtrade trading bots.

2024

Explorer file-tagging utility — intag2

Iterated on a Windows Explorer file and folder tagging utility, focusing on Microsoft Store publishing and CI pipelines.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead engineering on a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of an expense-heavy, high-frequency billing system; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Set technical direction and run ongoing code review as the primary quality gate; mentored engineers hands-on before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for the service fleet: hundreds of coordinated test/stage/production rollouts on Kubernetes, capacity management, and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.

- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
