

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Recent activity

Across the year, the engineer focused on building a SaaS crypto trading platform, developing HID firmware and Windows drivers, and conducting ML research for trading and poker. Additional work included Android LLM assistants, file-tagging utilities, and various automation tools.

Activity timeline (last 12 months)

2026 May

Windows input filter driver — input-driver

Built a kernel-mode input filter and injection driver with push-style event delivery and integration tests.

NZT mobile app updates — deeplay-io/nzt-mobile-app

Added product flavor and extended system information for the mobile assistant app.

2026 Apr

Crypto trading platform development — summit

Iterated on the SaaS crypto trading platform, building out infrastructure, execution engine, billing, and strategy templates.

HID firmware improvements — j-uni-hid

Addressed connectivity issues and drafted a new firmware variant for the ESP32-S3 emulation device.

File-tagging utility polish — intag2

Polished release workflows and changelog generation for the Windows Explorer file-tagging tool.

Aim assist and overlay project — MEMU3

Enhanced aim assist features with YOLO confidence thresholds, debug overlay, and USB-HID fallback.

2026 Mar

Firmware version releases — j-uni-hid

Released new firmware versions with dual-core and USB support for the HID device.

Crypto prediction model research — crypto-model-research

Conducted experiments with Mixture of Experts architectures and benchmarked crypto price prediction models.

Android LLM assistant — ozwil-android

Built an LLM-powered assistant with phone-use capabilities, focusing on sub-agent delegation and model management.

E-reader custom firmware — papyrix

Developed a custom firmware for an e-reader, adding map, knowledge base, and encoding support.

2026 Feb

CI/CD and store publishing — intag2

Iterated on CI/CD pipelines, Microsoft Store publishing, and CLI features for the file-tagging utility.

Code intelligence engine — jaxon

Expanded a graph-powered code analysis tool with LSP integration and multi-language support.

YOLO labeling tool — yolo-labeler

Built a fast, on-host YOLO annotation tool with multi-select and batch editing.

Neovim configuration — .dotfiles

Set up a full IDE environment in Neovim with LSP, treesitter, and remote clipboard support.

2026 Jan

Firmware stability fixes — j-uni-hid

Improved serial restart reliability and overall stability of the HID firmware.

Poker computer vision pipeline — poker-cv

Developed a CV pipeline for online poker hand analysis, achieving high accuracy in card and action detection.

Aim assist enhancements — MEMU3

Added linger mode, autofire, and HID click emulation to the aim assist project.

Task management app — tasker

Built a task management app with touch event visualization and direct launch features.

2025 Dec

Firmware feature expansion — j-uni-hid

Added support for new devices, performance modes, and BLE safety features to the HID firmware.

Autonomous coding tool — auto-claude

Enhanced an autonomous multi-session AI coding tool with squash merging and worktree management.

Aim assist modes — MEMU3

Implemented different aim assist modes and USB HID mouse movement hacks.

n8n Claude integration — n8n-nodes-claudecode

Updated an n8n node for Claude Code to use the Claude Agent SDK and added Haiku model support.

2025

Freqtrade strategy development — freqtrade_strategies

Developed and optimized multiple Freqtrade trading strategies with various indicators and parameters.

Freqtrade Telegram bot — freqtrade-tg-multibot

Built a multi-bot Telegram interface for managing Freqtrade instances with profit tracking.

Freqtrade monitoring app — freqtrade_monitor

Created a Flutter mobile app for monitoring Freqtrade bots with charts and win-rate visualization.

Telegram assistant bots — pAssistant

Worked on Telegram bot assistants for content forwarding, summarization, and image deduplication.

2024

Freqtrade strategy optimization — freqtrade_strats

Optimized Freqtrade trading strategies through hyperparameter tuning and backtesting.

Crypto signal Telegram bot — CryptoSignalerBot

Built a Telegram bot that generates crypto trading signals using AI and technical analysis.

ChatGPT Telegram bot — chatgpt_telegram_net

Maintained a .NET-based Telegram bot for ChatGPT interactions.

Experience

.NET Developer / Tech Lead

Deeplay · Full-time

Jun 2021 – Present · 4 yrs 11 mos

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions
