

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-22

Over the past year, the work has been anchored by the development of Summit, a SaaS crypto algorithmic trading platform with AI and neural network components, which saw a sustained, high-velocity push across its entire feature surface. The effort spanned deep backend execution and safety hardening, a complete trader discovery and social-copy-trading UX layer, and a layered risk-guard system. In parallel, significant research cycles were invested in crypto price prediction models, iterating through hundreds of experiments with mixture-of-experts architectures, and in computer vision projects for poker state extraction and real-time game assistance.

On the systems and firmware side, a feature-rich HID emulation firmware for ESP32-S3 was evolved through multiple hardware revisions, adding new input modes, performance profiles, and device support. A Windows kernel input filter driver was built from scratch, reaching a stable, tested release with a full integration-test suite. These efforts were complemented by a custom hotkey and automation tool with a scenario engine, and a fork of an e-ink firmware adding map and knowledge base applications.

A significant portion of the year was also dedicated to Android and desktop application development. An on-device LLM with phone-use capabilities was built, tackling model routing, tool safety, and background processing. A multi-engine TTS system for Android was assembled, integrating several speech models with custom text normalization and pitch control. A Windows Explorer file-tagging utility was hardened for store publication, and a graph-powered code intelligence engine was built to index codebases for AI agents. Across all projects, there was a strong emphasis on CI/CD pipeline stabilization, automated release workflows, and store compliance.

Activity timeline (last 12 months)

2026 Jun

Summit: Social trading and risk guard UX — summit

Built the trader discovery leaderboard with subscriber and AUM metrics, added follower kill-switch and live guard state on open positions, and delivered the user-facing guard configuration UI.

Summit: Execution safety and analytics hardening — summit

Hardened the money-path with auto-replay of dead letters, implemented exchange-enforced SL/TP on Binance futures followers, and built fee-adjusted net return analytics with admin observability.

Jolt: Scenario engine and hotkey automation — jolt

Built a minimal AutoHotKey alternative with a typed-action scenario engine, input gate, and interception support, then added conditional rule evaluation and debug logging.

2026 May

Input driver: Kernel filter release and test suite — input-driver

Stabilised the KMDF input filter driver with a push-style event delivery library, per-event block predicates, and a full integration-test runner covering all documented capabilities.

J-uni-hid: Fire-and-forget HID and matrix variant — j-uni-hid

Extended the ESP32-S3 firmware with a fire-and-forget emitting mode for higher USB HID event density and drafted an 8x8 matrix hardware variant.

MEMU3: GPU inference and aim assist overhaul — MEMU3

Switched YOLO inference from CUDA to DirectML, added a scan-loop FPS cap, and reworked the bow/flick aim system with bezier motion, closed-loop tracking, and user-input compensation.

J-TTS-Android: Multi-engine TTS and intonation control — j-tts-android

Integrated multiple TTS engines including sherpa-onnx and TeraTTS, added real pitch and intonation sliders, and implemented custom text normalization with RuNorm and omograph disambiguation.

Biscuit firmware: Knowledge base and FB2 reader — biscuit

Extended the e-ink device firmware with a knowledge base app, FB2 reader with encoding support, and mesh chat fixes.

2026 Apr

Summit: Admin UX and signal-tree observability — summit

Delivered admin log UX with datetime pickers and level filters, surfaced per-expert quorum votes in the signal tree, and added client-side search and sort on trader discovery.

J-uni-hid: New firmware variant and connection fixes — j-uni-hid

Drafted a new v13s8x8 firmware variant and fixed device disconnect and dying issues on the v13 hardware revision.

Papyrix: Map and knowledge base apps — papyrix

Built a map application with region selection and tile viewer, added a knowledge base app with taxonomy browser, and optimised the map renderer for Apple Silicon.

Intag2: Desktop.ini encoding and release workflow — intag2

Fixed desktop.ini writing to UTF-16 LE for non-ASCII compatibility and repaired the changelog generation in the release workflow.

2026 Mar

Crypto model research: MoE architecture experiments — crypto-model-research

Ran a large-scale research campaign on mixture-of-experts architectures, benchmarking split up/down MoE gates as a new champion and running 348 experiments across architecture variants.

Ozwil-Android: On-device LLM with phone use — ozwil-android

Built sub-agent delegation architecture with session-based tool execution, added model routing strategies, and implemented background service processing with wake rules and keep-alive.

J-uni-hid: Dual-core and USB firmware — j-uni-hid

Delivered v12 dual-core and v13 USB firmware variants for the ESP32-S3 HID emulation platform.

MEMU3: Overlay and aim assist persistence — MEMU3

Rewrote the overlay to D3D11+D2D+DComp, added a status window, and implemented mode and autofire state persistence across restarts with focused-window aim restriction.

Blackboard Launcher: E-ink note-taking launcher — blackboard-launcher

Overhauled the backdrop with swipe page navigation, added stray stroke prevention, and implemented status bar control with configurable hide-on-blackboard behaviour.

2026 Feb

Intag2: Store publishing pipeline and CLI — intag2

Stabilised the Microsoft Store publishing pipeline with PowerShell REST API, added a CLI --print argument, and

fixed custom property setting on folders.

Jaxon: Code intelligence graph engine — jaxon

Built a graph-powered code intelligence engine with LSP integration, DI registration detection, and dead code analysis across C++, Go, Rust, and Svelte parsers.

N8n-nodes-telepilot-2: CI stabilisation and album trigger — n8n-nodes-telepilot-2

Fixed auth race conditions, added a new album trigger, and moved TDLib session storage to a stable path outside node_modules.

Yolo-labeler: Fast on-host labelling tool — yolo-labeler

Built a minimal, fast YOLO labelling tool with multi-select mark mode, batch delete, and flexible YAML resolution.

Dotfiles: Neovim IDE and SSH setup — .dotfiles

Assembled a full Neovim IDE configuration with LSP, treesitter, and pre-commit secret detection, plus chezmoi-managed dotfiles with age-encrypted SSH keys.

2026 Jan

Poker-CV: Hand history extraction pipeline — poker-cv

Achieved 99% hand detection accuracy by filtering GT hands beyond video, built a generator-based recovery pattern, and implemented log reconstruction with full hand detail output.

J-uni-hid: Graceful COM restart — j-uni-hid

Fixed a COM port restart issue to improve connection stability on the HID firmware.

N8n-nodes-claudecode: Agent SDK migration — n8n-nodes-claudecode

Migrated the Claude Code n8n node to the Claude Agent SDK and added Haiku model support.

Tasker: Touch event UX improvements — tasker

Improved the Android tasker app with direct launch, completed status, and touch event visualisation on sensor charts.

2025

Freqtrade strategies: Strategy iteration and optimisation — freqtrade_strategies

Developed and refined numerous trading strategy implementations with enhanced entry signals, optimised parameters, and backtesting across multiple timeframes.

J-uni-hid: Multi-version firmware evolution — j-uni-hid

Evolved the HID firmware through versions v4 to v11, adding new devices, performance modes, BLE safety, and self-reporting across ESP32-S3 and atmega32u4 targets.

Auto-claude: Autonomous coding workflow — auto-claude

Built squash-merge and worktree completion features into the autonomous multi-session AI coding tool, with Git rules integration and task ID tracking.

MEMU3: HID mouse and aim assist foundation — MEMU3

Laid the foundation for the aim assist system with USB HID mouse rate limiting, overlay modes, and YOLO model integration.

Freqtrade-tg-multibot: Telegram bot and web app — freqtrade-tg-multibot

Built a Telegram bot with web application and Docker support, iterating on daily profit calculations and authentication handling.

Freqtrade monitor: Flutter dashboard UI — freqtrade_monitor

Developed a Flutter-based trading monitor with glassy card UI, expandable carousels, winrate bar charts, and import-export functionality.

pAssistant: Telegram content forwarding — pAssistant

Built a Telegram content assistant with multi-target sending, image deduplication, and summarisation capabilities.

2024

Freqtrade strategies: Hyperopt and leverage tuning — freqtrade_strats

Ran hyperopt campaigns and tuned leverage and parameters across multiple strategy variants, achieving high winrate and low drawdown configurations.

pAssistant: Initial Telegram automation build — pAssistant

Built the initial Telegram automation tool with content forwarding, logging, and store update handling.

ChatGPT Telegram .NET: Bot maintenance — chatgpt_telegram_net

Maintained the .NET ChatGPT Telegram bot with version bumps and updates.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-

app updates.

- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
