

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Recent activity

Focused on building a SaaS crypto algorithmic trading platform with AI and neural network capabilities. Also developed custom firmware for ESP32-S3 HID devices and a Windows kernel-level input filter driver.

Activity timeline (last 12 months)

2026 Jun

SaaS crypto trading platform — summit

Polished deployment configuration and authentication for the trading platform.

2026 May

ESP32-S3 HID firmware — j-uni-hid

Developed new firmware versions with USB and BLE HID capabilities.

Windows input filter driver — input-driver

Built a kernel-level driver for keyboard and mouse capture and injection.

Windows file-tagging utility — intag2

Maintained the file-tagging Explorer extension, including CI/CD and Store publishing.

Android TTS engine — j-tts-android

Enhanced the text-to-speech engine with multiple voice models and intonation controls.

2026 Apr

Crypto trading platform features — summit

Iterated on billing, strategy templates, security hardening, and deployment pipeline.

HID firmware variant — j-uni-hid

Worked on a new firmware variant for the ESP32-S3 device.

File-tagging utility maintenance — intag2

Continued maintenance of the Windows Explorer tagging tool.

2026 Mar

Firmware development — j-uni-hid

Continued development of the ESP32-S3 HID firmware.

Crypto prediction model research — crypto-model-research

Experimented with mixture-of-experts architectures for price prediction.

On-device LLM assistant — ozwil-android

Built an Android assistant with local LLM, tool use, and delegation.

2026 Feb

File-tagging utility updates — intag2

Worked on the Windows file-tagging tool, including CI/CD and Store publishing.

2026 Jan

HID firmware updates — j-uni-hid

Continued development of the ESP32-S3 HID firmware.

Poker computer vision — poker-cv

Developed a CV pipeline for online poker hand history reconstruction.

2025

Telegram trading bot — freqtrade-tg-multibot

Built a Telegram bot for managing Freqtrade trading instances.

Autonomous AI coding tool — auto-claude

Developed an autonomous multi-session AI coding assistant with worktree management.

HID firmware earlier versions — j-uni-hid

Worked on earlier versions of the ESP32-S3 HID firmware.

2024

Trading strategy development — freqtrade_strats

Developed and optimized trading strategies for Freqtrade.

Telegram assistant bot — pAssistant

Worked on a Telegram bot for content summarization and forwarding.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos

Akvelon (vendor for Microsoft) · Full-time

Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos

ICVR · Full-time

United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

auto-claude · TypeScript

Autonomous multi-session AI coding tool.

Last 12 months on GitHub: 2,643 contributions · 2,294 public commits · 125 PRs · 191 reviews. Generated 2026-06-10.
