

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Auto-generated weekly from GitHub commit history · updated 2026-06-22

The core effort centred on Summit, a SaaS crypto algorithmic trading platform with AI and neural network features. The engineer built out the entire system: execution engine integration with multiple exchanges, live stop-loss/take-profit, a layered guard system for risk management, follower and leaderboard features, and admin analytics. UX polish included mobile-responsive UI, Telegram user bot notifications, and onboarding flows. Security hardening and latent-risk fixes were a major theme alongside feature development.

Alongside Summit, the engineer developed a feature-rich mouse and keyboard emulation firmware for ESP32-S3 (j-uni-hid), iterating from v10 through v13 with USB, BLE, and touch capabilities, and a Windows kernel input filter driver (input-driver) for capturing and injecting input events. A lightweight AutoHotKey alternative (jolt) with interception support was also built.

Secondary projects spanned crypto trading strategy research and backtesting, a deep learning price prediction model with Mixture of Experts architecture, computer vision for poker hand tracking, an on-device LLM for Android with tool use and delegation, a Windows Explorer file-tagging extension, and an Android TTS engine with Russian voice support.

Activity timeline (last 12 months)

2026 Jun

Summit platform feature sprint — summit

Shipped a massive set of features: live SL/TP execution, guard system, follow-trading, leaderboard, Telegram user bot, admin analytics, and mobile UI improvements.

Lightweight AutoHotKey alternative — jolt

Built a scenario engine with interception support, typed actions, stateless themes, and debug logging.

2026 May

Firmware v13 and fire-and-forget emitting — j-uni-hid

Refined USB HID and BLE emulation, adding fire-and-forget event emitting, an 8x8 matrix variant, and platformio support.

Windows input filter driver finalization — input-driver

Completed the KMDF driver with push-style event delivery, integration tests, and relaxed SDDL permissions.

Desktop.ini UTF-16 fix and CI restructuring — intag2

Fixed encoding in desktop.ini for Explorer compatibility and restructured the CI pipeline for manual releases.

TTS engine expansion and Russian voice pipeline — j-tts-android

Integrated multiple TTS engines (TeraTTS, Sherpa, Piper) with Russian-specific normalisation, intonation control, and pitch adjustment.

2026 Apr

Firmware v13 USB and BLE debugging — j-uni-hid

Diagnosed and fixed USB disconnection issues and refined BLE connectivity for the ESP32-S3 firmware.

Changelog and release workflow — intag2

Fixed changelog generation and automated release drafting in CI.

2026 Mar

Firmware v12 dual-core and v13 USB foundation — j-uni-hid

Built v12 with dual-core architecture and laid groundwork for v13 USB HID support.

Crypto price prediction model research — crypto-model-research

Conducted 336+ experiments exploring Mixture of Experts, cross-pair features, and ensemble methods, achieving best combined F1 of 0.782.

On-device LLM with tool use and delegation — ozwil-android

Refined the Android LLM app with sub-agent delegation, tool routing, model keep-alive, and debuggability.

2026 Feb

CI/CD pipeline overhaul and store publishing — intag2

Rebuilt the CI pipeline with manual triggers, release tagging, and automated Microsoft Store submission logic.

Graph-based code intelligence engine — jaxon

Expanded Jaxon with LSP integration, index freshness detection, and new language parsers.

2026 Jan

Computer vision pipeline for poker hand tracking — poker-cv

Achieved 99% hand detection accuracy, integrated recovery module, and validated against PokerStars hand history protocol.

Firmware v11 fixes and Android reconnect — j-uni-hid

Addressed BLE reconnect issues, touch jitter, and refined performance profiles for v11.

2025

Freqtrade strategy development and backtesting — freqtrade_strategies

Iterated on dozens of trading strategies with hyperopt optimization, added new signal combinations, and refined entry/exit logic.

Telegram multi-bot for Freqtrade monitoring — freqtrade-tg-multibot

Built a web application and Telegram bot manager for tracking daily profit, trade performance, and bot status.

Firmware v10–v11 and HID experimentation — j-uni-hid

Developed multiple firmware versions adding USB/BLE touch, mouse, performance modes, and self-reporting.

Autonomous AI coding and automation — auto-claude

Extended the auto-claude multi-session AI coding tool with squash merging, Git rules, and task management.

2024

Windows Explorer file-tagging utility — intag

Maintained the legacy intag utility with CLI, logging, and UI polish, working toward a Microsoft Store release.

Freqtrade strategy early work — freqtrade_strats

Experimented with initial crypto trading strategies and hyperopt parameter tuning.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions,

operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
