36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-21

Over the past year, engineering effort has centered on building and hardening a sophisticated SaaS crypto trading platform, with deep work across backend resilience, billing, UX, and infrastructure. The primary codebase saw a major push to productionise the system: reconciling position state with exchanges, making the billing pipeline idempotent and configurable per mode, and adding self-monitoring alerts with dead-letter-queue replay. Simultaneously, a substantial research effort in Python explored crypto price prediction, iterating through hundreds of experiments with mixture-of-experts architectures and ensemble methods to push model accuracy. On the embedded side, custom firmware for ESP32-S3 HID emulation was refined across multiple hardware revisions, while a Windows kernel input filter driver was built from scratch for interception and injection of mouse and keyboard events. Secondary projects spanned Android TTS engine development with local model support, an on-device LLM chat application with sub-agent delegation, and a computer vision pipeline for poker table state extraction—each involving significant architectural design and integration work.

Activity timeline (last 12 months)

2026 Jun

Trading platform billing and resilience — summit

Built configurable billing modes, position-exchange reconciliation loops, and self-monitoring alerting infrastructure for the crypto algo-trading platform.

Lightweight input automator — jolt

Bootstrapped a minimal AutoHotKey alternative with a scenario engine, condition evaluation, and Interception driver support for low-level input automation.

2026 May

Trading platform UX and ops hardening — summit

Polished UI with frosted-glass design, surfaced per-trader trade history, and hardened operations with crash-loop-safe message replay and resilient execution refunds.

ESP32-S3 HID firmware — j-uni-hid

Developed new fire-and-forget emission patterns and an 8x8 matrix hardware variant of the custom mouse/keyboard emulation firmware.

Windows input filter driver — input-driver

Added push-style event delivery and per-event blocking to the kernel-mode interception driver, alongside an integration test suite.

Android TTS engine overhaul — j-tts-android

Integrated multiple local TTS engines including Piper and TeraTTS, added pitch control, and wired Russian text normalisation into the speech pipeline.

E-ink tablet reading firmware — biscuit

Extended xteink device firmware with a knowledge base application, FB2 ebook reader, and Mesh Chat fixes.

2026 Apr

Trading platform admin and follow system — summit

Expanded admin billing surfaces, hardened follower position state machines with idempotent fanout, and added per-trader follow trade history.

HID firmware USB and hardware variants — j-uni-hid

Continued iterating the ESP32-S3 firmware with USB protocol fixes and drafted a new v13 hardware variant.

Windows Explorer tag utility release — intag2

Stabilised the release pipeline for the file-tagging Windows Explorer extension, fixing CI/CD workflows and preserving existing desktop.ini metadata.

E-ink tablet firmware apps — papyrix

Built map and knowledge base applications, and optimised the tile renderer for Apple Silicon, for a custom xteink device firmware.

2026 Mar

Trading platform testing and billing — summit

Wrote end-to-end Playwright specs for admin and user flows, implemented win-mode fee reservation, and added maintenance-banner UX.

Crypto price prediction research — crypto-model-research

Conducted a large-scale experiment campaign comparing mixture-of-experts and ensemble architectures, pushing combined F1 above 0.777.

On-device AI assistant for Android — ozwil-android

Built sub-agent delegation architecture with router-first tool execution, KV-cache reuse, and multiple offline model integrations.

Custom aim-assist utility — MEMU3

Rewrote the rendering overlay to D3D11, added linger-mode auto-fire, and integrated YOLO object detection for computer vision experimentation.

E-ink launcher for note-taking — blackboard-launcher

Developed an e-ink-focused Android launcher with a drawing blackboard, status bar control, and gesture-based navigation.

2026 Feb

Trading platform infrastructure planning — summit

Maintained the platform with infrastructure planning and documentation of over-engineering cleanup and resilience findings.

Windows Explorer tag utility CI — intag2

Refactored CI into discrete workflows for manual releases and Microsoft Store publishing, troubleshooting Partner Center API integration.

Graph-powered code intelligence engine — jaxon

Added LSP integration, dependency injection pattern detection, and expanded multi-language parser support for the knowledge-graph code analyser.

YOLO labeling tool initial build — yolo-labeler

Built a minimal web-based YOLO annotation tool with multi-select mark mode and batch operations.

2026 Jan

HID firmware v12 dual-core release — j-uni-hid

Released v12 of the ESP32 firmware with dual-core architecture and began work on new device support.

Online poker CV pipeline — poker-cv

Achieved high-accuracy poker hand reconstruction from video, building a full pipeline from card detection to hand-history log generation.

2025

Trading strategy development — freqtrade_strategies

Heavily iterated on algorithmic trading strategies with hyperparameter optimisation, new signal formulations, and backtesting across multiple timeframes.

Crypto model research beginnings — crypto-model-research

Initiated the price prediction modelling project with early experiments on ensemble methods and temperature scaling.

Multi-session AI coding tool — auto-claude

Extended the autonomous coding assistant with squash merging, Git rules configuration, and worktree completion tracking.

ESP32 firmware revisions — j-uni-hid

Shipped several major firmware revisions (v10, v11) with BLE/USB touch and mouse profiles, self-reporting, and reconnection stability fixes.

Telegram automation tooling — freqtrade-tg-multibot

Built a multi-bot Telegram management tool with web application and Docker support for trading signal distribution.

2024

Algorithmic trading strategies — freqtrade_strats

Developed and hyperoptimised early crypto trading strategies with a focus on Sharpe ratio and low drawdown.

Personal C++ project — apollo_server

Experimented with Asio-based server programming in C++.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
