

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-29

Over the past year, I've been deeply focused on building and refining Summit, a SaaS crypto algo-trading platform with AI and neural network components — this is my primary project. I've been shipping features across the full stack: LLM-powered sentiment analysis and decision-making, futures configuration templates, real-time cost tracking from OpenRouter, a unified news and announcement system, and extensive UI polish. In parallel, I've been developing firmware for ESP32-S3-based HID devices (j-uni-hid) and a Windows kernel-mode input filter driver (input-driver), both of which are also primary projects. On the secondary side, I've been conducting systematic research into crypto price prediction models (crypto-model-research), building a computer vision pipeline for poker table state extraction (poker-cv), developing an Android TTS app with multiple neural engines (j-tts-android), creating an on-device LLM agent for Android (ozwil-android), and maintaining a Windows Explorer file-tagging utility (intag2). I've also iterated on algorithmic trading strategies (freqtrade_startegies) and Telegram-based bot monitoring tools (freqtrade-tg-multibot). The work spans C#, C++, Python, Kotlin, and embedded systems, with a strong emphasis on practical, self-hosted tooling and research-driven experimentation.

Activity timeline (last 12 months)

2026 Jun

Summit: AI trading platform core work — summit

Built LLM-powered sentiment analysis and decision-making pipelines, futures-config templates with optimization defaults, real-time per-call cost tracking from OpenRouter, a unified news and announcement system, and extensive UI polish across the platform.

Jolt: minimal AHK alternative — jolt

Added opt-in debug logging, fixed winapi hotkey condition evaluation, and refined the scenario engine with typed actions and interception support.

Jamminroot: CV automation tooling — jamminroot

Added LLM model override via environment variable, enforced first-person voice in CV output, and refined the CV generation pipeline with dry-run support and better repo importance tagging.

2026 May

j-uni-hid: ESP32-S3 HID firmware — j-uni-hid

Developed v13 firmware variant with fire-and-forget USB HID event emission and an 8x8 matrix variant with PlatformIO support.

input-driver: Windows input filter driver — input-driver

Added push-style event delivery API, relaxed SDDL to Interactive Users, and built an integration-test runner covering all documented capabilities.

j-tts-android: multi-engine TTS app — j-tts-android

Added question/exclamation intonation sliders, removed deprecated TTS engines, shipped F5-TTS and GPT-SoVITS export recipes, and integrated sherpa-onnx for Russian Piper voices.

MEMU3: CV and input emulation RnD — MEMU3

Switched YOLO GPU inference from CUDA to DirectML, added closed-loop tracking flick with bezier motion and user-input compensation, and refactored the mode system.

biscuit: e-ink firmware expansion — biscuit

Added Knowledge Base app, FB2 reader, screensaver folder, and Mesh Chat fixes to the biscuit firmware for xteink 4.

2026 Apr

j-uni-hid: firmware variant work — j-uni-hid

Drafted new v13s8x8 firmware variant and fixed a device disconnection issue in the v13 firmware.

papyrix: e-ink firmware features — papyrix

Optimized map renderer for Apple Silicon, added grayscale tileserver, built map and Knowledge Base apps with full UI, and fixed FB2 encoding support for windows-1251 and KOI8-R.

FICLash: proxy client update — FICLash

Bumped Clash.Meta submodule to re-expose ProxiesWithProviders and GetProxyNameList APIs, and added XMLHttpRequest support.

2026 Mar

crypto-model-research: price prediction RnD — crypto-model-research

Conducted hundreds of experiments on crypto price prediction models, achieving new best scores with Mixture-of-Experts architectures, snapshot ensembles, and cross-pair features; documented the full research pipeline.

ozwil-android: on-device LLM agent — ozwil-android

Rewrote sub-agent architecture with session-based delegation and tool execution, added KV cache reuse, conversation revert/fork, and a questionnaire-based setup wizard.

MEMU3: aim assist and overlay work — MEMU3

Restricted aim assist to focused window, persisted mode and autofire state, and rewrote the overlay using D3D11+D2D+DComp with a status window.

blackboard-launcher: E-Ink launcher — blackboard-launcher

Overhauled backdrop rendering, added swipe page navigation, status bar control, and fixed Onyx SDK drawing reliability.

2026 Feb

intag2: Windows file-tagging utility — intag2

Added .pdf to supported extensions, restructured CI pipelines for manual triggering and auto-drafting releases, fixed Store publishing workflows, and added CLI support for reading properties.

jaxon: code intelligence engine — jaxon

Added LSP integration for language-server-powered analysis, index freshness detection with incremental sync, and expanded DI registration and dead code detection for multiple frameworks.

n8n-nodes-telepilot-2: Telegram n8n nodes — n8n-nodes-telepilot-2

Fixed auth race conditions, upgraded CI test version, added retry logic for npm install, and added a new album trigger.

yolo-labeler: on-host YOLO labeler — yolo-labeler

Added multi-select mark mode for batch delete and label clearing, Ctrl+Delete entry deletion, and flexible yaml resolution.

dotfiles: chezmoi-managed config — .dotfiles

Set up initial Neovim config with full IDE setup, added pre-commit hook for secret detection, and fixed treesitter and LSP config for Neovim 0.11+.

2026 Jan

poker-cv: computer vision for poker — poker-cv

Achieved 99% hand detection and 97.8% board card accuracy by implementing generator-based recovery, pipeline API, and comprehensive state validation; added smoke tests and refactored constants.

j-uni-hid: firmware updates — j-uni-hid

Added graceful COM restart handling to the firmware.

tasker: Android task management — tasker

Improved UX with direct launch, completed status, and touch event visualization on sensor charts.

n8n-nodes-claudecode: Claude n8n nodes — n8n-nodes-claudecode

Fixed abort controller cleanup and changed default permission mode to acceptEdits.

2025 Dec

j-uni-hid: major firmware iteration — j-uni-hid

Developed v11 firmware with USB Touch, BLE Touch+Mouse, self-reporting, performance profiles, and throttled mode; fixed Android reconnect and touch jitter issues.

auto-claude: autonomous AI coding tool — auto-claude

Added squash-merge support, completion detection, Git Rules system, and Task ID fields to the autonomous multi-session AI coding application.

MEMU3: HID and aim assist updates — MEMU3

Added USB HID mouse movement hack with rate limiting and integrated it with the aim assistant.

2025

freqtrade_startegies: trading strategy development — freqtrade_startegies

Developed and iterated on numerous algorithmic trading strategies for Freqtrade, including Fenix, botman, and custom pattern-based strategies, with extensive backtesting and parameter optimization.

freqtrade-tg-multibot: Telegram bot for trading — freqtrade-tg-multibot

Built a Telegram-based multi-bot monitoring and management tool for Freqtrade instances, with web dashboard, Docker support, and daily profit calculations.

pAssistant: Telegram automation tooling — pAssistant

Maintained a Telegram content aggregation and reposting bot, adding image deduplication, multi-target sending, and summarization features.

freqtrade_monitor: Flutter trading dashboard — freqtrade_monitor

Built a Flutter-based mobile dashboard for monitoring Freqtrade instances, with glassy cards, winrate charts, and import/export functionality.

n8n-nodes-telepilot-2: Telegram n8n integration — n8n-nodes-telepilot-2

Forked and maintained n8n nodes for Telegram automation, adding Alpine Linux support and Docker deployment.

2024

freqtrade_strats: strategy optimization — freqtrade_strats

Optimized and backtested various trading strategies for Freqtrade, focusing on high win rate and low drawdown configurations.

pAssistant: Telegram bot maintenance — pAssistant

Continued maintenance of the Telegram content bot, with logging improvements and bug fixes.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use

scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.

- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos

Akvelon (vendor for Microsoft) · Full-time

Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
