

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Recent activity

Focused on building a SaaS crypto trading platform, developing HID firmware and input drivers, and conducting AI research for trading and computer vision. Also maintained several Telegram bots, a file-tagging utility, and an on-device LLM assistant.

Activity timeline (last 12 months)

2026 May

Windows input filter driver development — input-driver

Built and refined a KMDF input filter driver for capturing and injecting keyboard and mouse events, including integration tests and library features.

NZT mobile app updates — deeplay-io/nzt-mobile-app

Added a new product flavor and extended system information reporting in the NZT mobile assistant.

2026 Apr

Crypto trading platform development — summit

Completed a .NET rewrite of the SaaS crypto algo trading platform, adding strategy templates, proxy infrastructure, billing, and security hardening.

ESP32-S3 HID firmware iteration — j-uni-hid

Developed new firmware variants and fixed connectivity issues for the feature-rich mouse and keyboard emulation device.

File tagging utility polish — intag2

Enhanced the Windows Explorer file-tagging tool with PDF support, CLI improvements, and automated Store publishing pipelines.

CV aim assist tool development — MEMU3

Improved a computer vision-based aim assist utility with YOLO confidence filtering, debug overlay, and input fallback mechanisms.

2026 Mar

HID firmware hardware revisions — j-uni-hid

Introduced v12 (dual-core) and v13 (USB) versions of the ESP32-S3 mouse/keyboard emulation firmware.

Crypto price prediction research — crypto-model-research

Ran extensive experiments on deep learning models for crypto price prediction, achieving improvements with sparse MoE and snapshot ensembles.

On-device LLM assistant development — ozwil-android

Developed an Android LLM assistant with local model inference, tool use, and multi-agent delegation for phone control.

Aim assist tool enhancements — MEMU3

Rewrote the overlay rendering to DirectX 11, added linger mode, autofire, and YOLO model integration for the CV aim assist utility.

2026 Feb

File tagging utility release engineering — intag2

Automated CI/CD and Microsoft Store publishing for the Windows file-tagging tool, and added a CLI property reader.

n8n Telegram node maintenance — n8n-nodes-telepilot-2

Fixed authentication issues and added an album trigger to the n8n TelePilot node for Telegram automation.

Code intelligence engine development — jaxon

Added LSP integration, automatic index sync, and expanded language support for the graph-based code analysis tool.

Neovim configuration maintenance — .dotfiles

Updated the Neovim IDE setup with LSP config migration, treesitter fixes, and secret detection pre-commit hook.

2026 Jan

HID firmware fix — j-uni-hid

Addressed a COM restart issue in the ESP32-S3 mouse/keyboard emulation firmware.

Poker CV system development — poker-cv

Built a computer vision pipeline to detect poker hands, cards, and actions from screen recordings, achieving high accuracy.

Aim assist tool updates — MEMU3

Continued development of the CV-based aim assist utility with general improvements.

n8n Telegram node fixes — n8n-nodes-telepilot-2

Fixed TDLib session storage and restored required API parameters for the TelePilot n8n node.

2025 Dec

HID firmware v11 development — j-uni-hid

Built version 11 of the ESP32-S3 firmware, adding new device support, BLE safety, performance profiles, and self-reporting.

Autonomous coding tool enhancements — auto-claude

Added squash merging, worktree completion tracking, and git rules configuration to the auto-claude multi-session AI coding system.

Aim assist modes and input — MEMU3

Introduced operational modes and USB HID mouse rate limiting for the CV aim assist tool.

NZT app 64-bit support — deeplay-io/nzt-mobile-app

Enabled arm64-v8a architecture support in the NZT mobile assistant.

2025

Freqtrade strategy development — freqtrade_strategies

Iterated on multiple trading strategies with hyperopt optimization and backtesting for the Freqtrade bot.

Freqtrade Telegram dashboard — freqtrade-tg-multibot

Created a web application with Docker support to monitor multiple Freqtrade bots via Telegram, with profit tracking and authentication.

Freqtrade monitor app — freqtrade_monitor

Built a mobile app with glassy UI cards, profit charts, and bot management for Freqtrade.

Telegram assistant bot development — pAssistant2

Started a new Telegram bot project with API integration and structured logging.

2024

Freqtrade strategy optimization — freqtrade_strats

Performed hyperparameter optimization and backtesting of trading strategies for the Freqtrade bot.

Crypto signal bot development — CryptoSignalerBot

Developed a Telegram bot that uses AI to generate crypto trading signals based on technical indicators and divergences.

File tagging utility early development — intag

Developed the initial CLI and UI for the Windows file-tagging tool.

ChatGPT Telegram bot maintenance — chatgpt_telegram_net

Updated the .NET ChatGPT Telegram bot with long message support and performance improvements.

Experience

.NET Developer / Tech Lead

Deeplay · Full-time

Jun 2021 – Present · 4 yrs 11 mos

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions
