36 y/o

Not a big fan of pigeons

---

## Skills

**Languages:** C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

**Backend:** ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

**Infrastructure:** Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

**Data & observability:** ClickHouse · Grafana · metrics & alerting design · analytics pipelines

**Mobile & desktop:** Android (Kotlin) · accessibility services · desktop applications · UI automation

**AI & automation:** LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

**Leadership:** team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

---

## Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-22

I built the follower execution pipeline, guard system, and trader dashboard for Summit, a SaaS crypto trading platform. This work spanned transactional outbox messaging, live SL/TP on multiple exchange APIs, a layered risk guard with independent per-follow configuration, and a full notification stack (in-app and Telegram). I also shipped position lifecycle management, admin analytics, and user-facing features like onboarding and leaderboards.

On the systems side, I developed a multi-version HID emulation firmware for the ESP32-S3, culminating in v13 with fire-and-forget event injection and an 8×8 matrix variant. I wrote a Windows kernel-mode input filter driver that captures and injects keyboard/mouse events, complete with a push-style listener API, integration tests, and per-event block predicates.

I conducted AI research with mixture-of-experts and ensemble architectures for crypto price prediction, running hundreds of experiments and pushing accuracy to new highs. For Android, I engineered an on-device LLM assistant with sub-agent delegation and tool routing, and I integrated multiple TTS engines with custom pitch, intonation, and licensing for commercial use. I also built a computer vision pipeline for poker hand recognition and a YOLO-based labeling tool.

Additionally, I continued work on the Intag file-tagging tool, Freqtrade strategies, Telegram bot infrastructure for trade monitoring, autonomous coding tooling, and an AutoHotKey alternative.

---

## Activity timeline (last 12 months)

### 2026 Jun

#### **Follower execution and guard system — summit**

Built the follower copy-trading pipeline with transactional outbox, live SL/TP, layered risk guards, notifications, and a redesigned trader dashboard.

#### **Minimal input automation tool — jolt**

Implemented a lightweight AutoHotKey alternative with a scenario engine, stateless themes, and interception driver integration.

## 2026 May

### **HID emulation firmware v13 — j-uni-hid**

Released v13 firmware with fire-and-forget event injection and an 8×8 matrix variant, improving USB HID throughput.

### **Windows input filter driver — input-driver**

Delivered a KMDF keyboard/mouse filter driver with a push-style listener API, integration tests, and relaxed SDDL for easier deployment.

### **File tagging Explorer extension — intag2**

Fixed desktop.ini encoding to correctly render non-ASCII characters in Windows Explorer.

### **Android TTS engine expansion — j-tts-android**

Added TeraTTS and XTTS v2 engines, pitch and intonation controls, and cleaned up licensing for commercial distribution.

## 2026 Apr

### **Firmware fixes and new variant — j-uni-hid**

Fixed a device disconnection bug and drafted a new v13s8x8 firmware variant for the matrix layout.

### **CI and release pipeline overhaul — intag2**

Restructured CI into separate build and store-publish workflows and fixed changelog generation.

### **E-ink map and knowledge base — papyrix**

Optimized the map renderer for Apple Silicon and built a knowledge base app with taxonomy browser for the custom e-ink reader.

## 2026 Mar

### **Crypto price prediction research — crypto-model-research**

Ran hundreds of experiments with mixture-of-experts and ensemble models, achieving new best accuracy on spike regression.

### **On-device LLM assistant — ozwil-android**

Architected a sub-agent delegation system, tool-routing pipeline, and background processing for a pocket LLM with phone-use capabilities.

### **Aim assist overlay rewrite — MEMU3**

Replaced the rendering overlay with a D3D11 composition engine and added a YOLO-confidence-gated autofire system.

## 2026 Feb

### **Store publishing stabilisation — intag2**

Battled Partner Center API quirks by switching to PowerShell REST with exponential backoff and finalised the Microsoft Store submission pipeline.

### **Graph-powered code intelligence engine — jaxon**

Built Jaxon, a knowledge graph indexer with tree-sitter parsers, DI registration detection, and MCP tools for AI agent integration.

## 2026 Jan

### **Computer vision poker hand capture — poker-cv**

Completed a pipeline for detecting hands, board cards, and blinds from online poker screenshots, achieving over 99% accuracy.

## 2025

### **Algorithmic trading strategy development — freqtrade\_startegies**

Developed and backtested dozens of trading strategies (Fenix, NASOS) with hyperopt optimisation, targeting high Sharpe ratios and low drawdown.

### **Freqtrade Telegram monitoring bot — freqtrade-tg-multibot**

Built a multi-bot Telegram interface with daily profit tracking, a web dashboard, and Docker deployment for Freqtrade.

### **Autonomous AI coding tooling — auto-claude**

Extended the multi-session AI coding framework with squash-merge workflows, completion tracking, and Git rules

configuration.

### **Content assistant bots — pAssistant**

Created Telegram bot assistants for content summarisation, multi-target forwarding, and image deduplication.

## **2024**

### **Early Freqtrade strategy work — freqtrade\_strats**

Experimented with strategy optimisation and custom indicators for algorithmic trading.

### **Windows Explorer tagging tool — intag**

Developed a file-tagging shell extension with CLI support and UI polish.

## **Experience**

### **Tech Lead**

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

### **Lead .NET Developer**

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

## Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

## Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos

Akvelon (vendor for Microsoft) · Full-time

Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

## Developer

Sep 2018 – Feb 2019 · 5 mos

ICVR · Full-time

United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

## Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

## Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

## Selected projects

### summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

### j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

### input-driver · C

Windows input filter and injection driver similar to Interception.

### freqtrade\_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

**crypto-model-research** · Python

R&D project for crypto price prediction models.

**poker-cv** · Python

Computer vision experiments for online poker platforms.

**intag2** · C++

Assign tags to files and folders in Windows Explorer.

**j-tts-android** · Kotlin

Android TTS engine using Silero and phonetizers.

**ozwil-android** · Kotlin

LLM-powered Android assistant with phone control capabilities.

**freqtrade-tg-multibot** · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
