

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-22

Over the past year, I've been building and iterating on a broad set of projects spanning trading infrastructure, embedded firmware, AI research, and developer tooling.

The core of my work has been on Summit, a SaaS crypto algorithmic trading platform. I've been building out its entire feature surface — from live trading execution and risk management guards to a social-follow system, trader discovery, and a full notification pipeline. The work has been a mix of greenfield feature development, deep execution-layer hardening, and UI/UX polish across the admin and user dashboards.

On the hardware and systems side, I've been developing j-uni-hid, a feature-rich mouse and keyboard emulation firmware for ESP32-S3, and input-driver, a Windows kernel input filter driver. Both projects involved low-level protocol work, performance tuning, and building robust testing and integration pipelines.

I've also invested significant time in AI and research-adjacent projects. Crypto-model-research was a focused R&D campaign on price prediction models, running hundreds of experiments on mixture-of-experts architectures. Poker-cv applied computer vision to online poker, building a full pipeline from screen capture to hand history reconstruction. Ozwil-android brought on-device LLM with tool-use capabilities to mobile, while j-tts-android built a multi-engine TTS system with deep linguistic processing.

Across the rest of my portfolio, I maintained and extended several tools: a Windows Explorer tagging utility (intag2), a CV-based aim assistant (MEMU3), a code intelligence graph engine (jaxon), and various automation and CI/CD pipelines for my own infrastructure.

Activity timeline (last 12 months)

2026 Jun

Trading platform feature push — summit

Built out live SL/TP execution, named guard system, position lifecycle timeline, and user-facing balance/credit UX. Shipped Telegram notifications, paper follow mode, and trader discovery with leaderboard.

Minimal automation engine — jolt

Built a lightweight AutoHotKey alternative with a typed scenario engine, input gate, and interception support.

CV activity timeline generator — jamminroot

Iterated on the LLM-driven CV generation pipeline, enforcing voice rules and refining the output schema.

2026 May

HID firmware v13 release — j-uni-hid

Shipped v13 firmware with fire-and-forget event emission, 8x8 matrix variant, and platformio build support.

Windows input filter driver — input-driver

Built a KMDF input filter driver with capture and injection, added push-style event delivery, and wrote an integration test suite covering all documented capabilities.

Aim assist refinement — MEMU3

Reworked the YOLO inference pipeline to DirectML, added closed-loop flick tracking, and built a D3D11 overlay with status window.

Android TTS engine expansion — j-tts-android

Added pitch control, intonation sliders, and multiple new TTS engines including sherpa-onnx and TeraTTS. Integrated RuNorm text normalization and removed legacy engines.

2026 Apr

E-ink firmware apps — papyrix

Built a map app with tile rendering, a knowledge base browser, and FB2 encoding fixes for the custom xteink firmware.

Explorer tagging utility — intag2

Fixed desktop.ini encoding for non-ASCII rendering and preserved existing folder metadata entries.

Clash proxy transport — FICLash

Added XHTTP transport support and re-exposed proxy provider APIs in the Clash.Meta fork.

2026 Mar

Crypto price model research — crypto-model-research

Ran a large-scale experiment campaign on mixture-of-experts architectures, pushing the model to a new champion with split MoE gates and cross-pair features.

On-device LLM with tool use — ozwil-android

Rewrote the sub-agent architecture with session-based delegation, added model presets, KV cache reuse, and background service architecture for wake processing.

E-ink launcher polish — blackboard-launcher

Built a note-taking-centric Android launcher for e-ink readers with gesture navigation and status bar control.

Aim assist YOLO integration — MEMU3

Added YOLO confidence threshold UI, runtime fallback from Interception to USB-HID, and restricted aim assist to focused window.

2026 Feb

Code intelligence graph engine — jaxon

Built a graph-powered code intelligence engine with LSP integration, DI registration detection, and multi-language tree-sitter parsers.

Explorer tagging CI overhaul — intag2

Restructured the CI pipeline for manual triggering, fixed MS Store publishing with PowerShell REST API, and added auto-updating changelog.

YOLO labeling tool — yolo-labeler

Built a fast, on-host YOLO labeling tool with multi-select mark mode and batch operations.

Neovim dotfiles — .dotfiles

Set up a full Neovim IDE configuration with LSP, treesitter, and pre-commit secret detection hooks.

2026 Jan

Poker CV pipeline — poker-cv

Built a computer vision pipeline for online poker, achieving high accuracy on hand detection, board cards, and blinds. Added log reconstruction and generator-based recovery.

HID firmware v12 and v13 — j-uni-hid

Developed dual-core v12 and USB-focused v13 firmware variants with new device support and graceful COM restart.

n8n TelePilot node fixes — n8n-nodes-telepilot-2

Stabilized the TDLlib session storage and fixed auth race conditions in the n8n TelePilot node.

Android task automation — tasker

Built a task automation app with touch event visualization and direct launch UX improvements.

2025

Trading platform foundation — summit

Built the core SaaS trading platform throughout the year — execution engine, risk guards, follow system, and admin tooling. Heavy focus on resilience and observability.

HID firmware iterations — j-uni-hid

Developed multiple firmware versions (v10-v11) across ESP32-S3 and C3 targets, adding BLE touch, USB mouse, self-reporting, and performance profiles.

Freqtrade strategy development — freqtrade_strategies

Iterated on dozens of trading strategies with hyperopt tuning, parameter optimization, and new strategy implementations across multiple timeframes.

Autonomous coding agent — auto-claude

Built an autonomous multi-session AI coding system with worktree management, squash merging, and Git rules configuration.

Telegram trading bots — freqtrade-tg-multibot

Built a multi-bot Telegram management system with Docker support, profit tracking, and Telegram authentication.

Content aggregation and LLM tools — pAssistant

Built a content aggregation and forwarding tool with multi-target sending, image deduplication, and summarization features.

2024

Freqtrade strategy optimization — freqtrade_strats

Ran hyperopt campaigns and strategy tuning across multiple configurations, focusing on high win rate and low drawdown setups.

Explorer tagging utility — intag

Built the initial version of a Windows Explorer file tagging utility with CLI support and property management.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with

validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).

- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
