36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-25

I've been deeply engaged in building and refining a SaaS crypto algo trading platform (summit), integrating LLM-driven decision-making for exit strategies, position sizing, and scanner cadence. The platform underwent a major rename from Trader to Strategy, with a reusable expert pool and a quorum-based exit signal routing. On the firmware side, I developed feature-rich mouse and keyboard emulation firmware for ESP32-S3 (j-uni-hid), iterating through multiple versions with BLE, USB, and touch support. I also built a Windows input filter driver (input-driver) from scratch, adding push-style event delivery and integration tests.

Alongside these primary projects, I conducted extensive research on crypto price prediction models (crypto-model-research), achieving state-of-the-art results with Mixture of Experts architectures. I built an Android TTS app (j-tts-android) supporting multiple engines and Russian text normalisation, and an LLM-powered Android assistant (ozwil-android) with sub-agent delegation and tool routing. I also worked on computer vision for poker hand detection (poker-cv), a Windows Explorer tagging utility (intag2), and numerous Freqtrade trading strategies and monitoring tools. The year also included work on an autonomous coding assistant (auto-claude), a Telegram multi-bot manager, and various smaller utilities.

Activity timeline (last 12 months)

2026 Jun

SaaS crypto algo trading platform — summit

Built and refined the trading platform with LLM-driven exit strategies, scanner cadence model, UI typography overhaul, and backend rename from Trader to Strategy.

CV generation toolchain — jamminroot

Maintained the personal CV generator, adding LLM voice enforcement, dry-run mode, and heatmap improvements.

Minimal AutoHotKey alternative — jolt

Built a lightweight input automation tool with interception support, scenario engine, and conditions system.

2026 May

ESP32-S3 firmware development — j-uni-hid

Developed firmware v13 with fire-and-forget emitting and 8x8 matrix variant for mouse and keyboard emulation.

Windows input filter driver — input-driver

Shipped v1.2 with push-style event delivery, integration tests, and library predicates for the WDK driver.

Windows Explorer tagging utility — intag2

Fixed desktop.ini encoding for non-ASCII folder metadata to ensure proper rendering in Explorer.

Android TTS app — j-tts-android

Built the TTS app with multiple engines (Piper, VITS, F5-TTS), pitch control, and Russian text normalisation.

CV generator enhancements — jamminroot

Added project cards with pulse charts and workflow rebase retries to the CV generation pipeline.

Aim assist and YOLO inference — MEMU3

Refactored YOLO inference to DirectML, added bow/flick tracking, and improved aim assist modes.

2026 Apr**Firmware fixes and variants — j-uni-hid**

Fixed dying/disconnect issues in firmware v13 and drafted the v13s8x8 variant.

Tagging utility maintenance — intag2

Fixed changelog generation and preserved existing desktop.ini entries when writing folder metadata.

Aim assist improvements — MEMU3

Added HP aim scaling, debug overlay, and YOLO confidence threshold UI.

E-ink reader firmware — papyrix

Added Map app, Knowledge Base app, FB2 encoding fixes, and optimized map renderer for Apple Silicon.

Proxy client enhancements — FICLash

Added XHTTP transport support via rebased mihomo and bumped Clash.Meta.

2026 Mar**Crypto price prediction research — crypto-model-research**

Conducted extensive experiments with MoE architectures and ensemble methods, achieving best combined F1 of 0.7817.

LLM-powered Android assistant — ozwil-android

Rewrote sub-agent architecture with session-based delegation, added tool routing strategies, and improved model settings UI.

Overlay and autofire for aim assist — MEMU3

Rewrote overlay to D3D11+D2D, added status window, autofire, and YOLO model loading.

E-ink reader UI and features — papyrix

Rewrote MapApp UI to landscape, added tile server, and improved FB2 support.

E-ink launcher development — blackboard-launcher

Overhauled backdrop, added swipe page navigation, status bar control, and gesture zones.

Firmware version releases — j-uni-hid

Released v12 (dual-core) and v13 (USB) firmware variants for ESP32-S3.

2026 Feb**CI and release pipeline overhaul — intag2**

Restructured CI pipelines for manual triggering, added auto-draft releases, and fixed Store submission workflows.

Tagging utility documentation — intag

Updated README for v2.0 release and added privacy policy for Microsoft Store submission.

Telegram node for n8n — n8n-nodes-telepilot-2

Fixed auth race condition, upgraded CI test version, and added album trigger.

Code intelligence engine — jaxon

Added LSP integration, dead code detection improvements, and expanded language support with tree-sitter.

Neovim configuration — .dotfiles

Updated Neovim config for 0.11 API, added secret detection pre-commit hook.

YOLO labeler tool — yolo-labeler

Added multi-select mark mode and Ctrl+Delete deletion for fast annotation.

Dotfiles management — dotfiles

Added SSH keys and initial chezmoi-managed dotfiles.

2026 Jan

Poker hand detection from video — poker-cv

Achieved 99% hand detection accuracy, added blinds detection, and built pipeline for poker state recovery from video.

Firmware COM fix — j-uni-hid

Fixed graceful COM restart in firmware.

Aim assist updates — MEMU3

Added updates to modes and fixes.

Claude Code n8n node — n8n-nodes-claudecode

Updated to Claude Agent SDK v0.2.12 and fixed abort controller cleanup.

Task management app — tasker

Improved UX with direct launch, completed status, and touch event visualization.

2025

Freqtrade trading strategies — freqtrade_strategies

Developed and optimized numerous trading strategies including Fenix, botman, and ns531 variants with parameter tuning and backtesting.

Telegram multi-bot manager — freqtrade-tg-multibot

Built a web app with Docker support for managing multiple Freqtrade bots via Telegram, including daily profit calculations and authentication.

Firmware v11 development — j-uni-hid

Continued firmware development with v11 featuring new devices, BLE improvements, self-reporting, and performance profiles.

Autonomous coding assistant — auto-claude

Added squash-merge, git rules system, and task ID features to the multi-session AI coding tool.

Telegram automation tool — pAssistant

Maintained the Telegram bot with summarization, image dedup, and multi-target sending.

Freqtrade monitoring app — freqtrade_monitor

Built a Flutter monitoring app with charts, card UI, and import/export functionality.

Aim assist initial development — MEMU3

Initial development with USB-HID rate limiting and aim assist integration.

Telegram node for n8n — n8n-nodes-telepilot-2

Added Alpine Linux support and Docker deployment for the Telegram node.

Tagging utility updates — intag

Added metadata property support and privacy policy for Store submission.

Content collector tool — jContentCollector

Built a content collector with webhook and ad filtering.

2024

Trading strategy development — freqtrade_strats

Developed and optimized trading strategies with hyperopt and leverage adjustments.

Telegram automation initial work — pAssistant

Initial development of Telegram automation tool with forwarding and logging.

Tagging utility initial work — intag

Initial work on Windows Explorer tagging utility with UI polish.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions,

operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
