

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Recent activity

Focused on building the Summit crypto trading platform, developing computer vision and input emulation tools, and advancing on-device AI assistants. Also maintained trading automation bots and firmware projects.

Activity timeline (last 12 months)

2026 Jun

Auth and deployment fixes on Summit platform — summit

Tweaked authentication pipeline and Docker deployment for the crypto trading SaaS.

Started new input automation engine Jolt — jolt

Began building a lightweight hotkey tool with interception and scenario support.

2026 May

Firmware features for ESP32-S3 HID device — j-uni-hid

Added fire-and-forget event emission and an 8×8 matrix variant to the mouse/keyboard firmware.

Windows input driver library and tests — input-driver

Integrated push-style event delivery and wrote integration tests for the KMDF input filter.

Fixed Explorer file metadata encoding — intag2

Ensured desktop.ini writes in UTF 16 LE for non ASCII tag display in Windows Explorer.

Android TTS engine expansion and polish — j-tts-android

Added multiple speech engines, pitch control, intonation sliders, and Russian text normalization.

2026 Apr

Major feature rollout on Summit crypto platform — summit

Built quickstart templates, outbound proxy infrastructure, billing revamp, and completed .NET rewrite deployment.

Firmware variant development for ESP32-S3 — j-uni-hid

Drafted a new firmware variant with USB improvements and fixed connection stability.

Release automation for Windows file tagger — intag2

Polished release pipelines and metadata handling for the Explorer tagging utility.

Aim assist enhancements with YOLO overlay — MEMU3

Improved target detection, autofire gating, and debug overlay for the CV-based input tool.

2026 Mar

Dual-core firmware release for ESP32-S3 — j-uni-hid

Shipped new firmware versions supporting dual-core operation and improved USB connectivity.

Crypto price model research with MoE architectures — crypto-model-research

Ran controlled experiments on mixture-of-experts models and published benchmark results for spike prediction.

On-device LLM assistant with agent delegation — ozwil-android

Implemented sub-agent delegation, model presets, and background processing for the Android LLM tool.

Overlay and state persistence for CV tool — MEMU3

Rewrote the overlay with D3D11/D2D and added mode persistence across restarts.

2026 Feb

Store publishing and CI polish for file tagger — intag2

Automated Microsoft Store submissions, fixed release workflows, and expanded CLI capabilities.

Code intelligence engine with LSP integration — jaxon

Added language-server support, DI detection, and multi-language parsers to the graph-based code analysis tool.

2026 Jan

COM restart fix for HID firmware — j-uni-hid

Improved serial connection recovery for the custom input device firmware.

Computer vision pipeline for online poker — poker-cv

Built a pipeline for detecting cards, blinds, and actions from poker table video streams.

2025

Telegram bot for Freqtrade trading — freqtrade-tg-multibot

Developed a multi bot Telegram interface with authentication and profit tracking for the Freqtrade platform.

Autonomous AI coding sessions tool — auto-claude

Built a multi session AI coding assistant with worktree management, squash merging, and git rules.

Algorithmic trading strategy development — freqtrade_strategies

Iterated on multiple Freqtrade strategies, running hyperopt optimizations and backtesting for crypto markets.

Initial CV/input emulation experiments — MEMU3

Started the MEMU3 project with HID mouse emulation, YOLO integration, and aim assistance prototyping.

2024

Early Freqtrade strategy research — freqtrade_strats

Developed and backtested trading strategies, exploring hyperopt and leveraged configurations.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead engineering on a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms.
- Set technical direction and run ongoing code review as the primary quality gate.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app, CI/CD, dynamic server configuration.
- Built and maintain internal frameworks — notably an image/video tool for previewing and scaling rectangular regions — adopted team-wide for QA and content production.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Coordinated release rollouts across 10+ target online platforms; tightened the deployment pipeline.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

auto-claude · TypeScript

Autonomous multi-session AI coding tool.
