

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-06-23

I've been primarily focused on building a SaaS crypto algo trading platform (summit) with an AI twist — implementing backtest engines, LLM-driven exit decisioning, real-time trading guards, membership tiers, and an interactive dashboard with equity curves and performance analytics. In parallel, I reworked the ESP32-S3 firmware for a USB HID mouse/keyboard emulator (j-uni-hid), adding new hardware variants, dual-core and USB support, and BLE power optimization. I also built a Windows WDK input filter driver (input-driver) for low-level keyboard/mouse capture and injection. Across secondary projects, I iterated on crypto trading strategy parameterizations in freqtrade, researched price-prediction models with Mixture-of-Experts architectures, developed computer vision pipelines for poker table state recognition, maintained a Windows file-tagging utility, built an Android TTS engine with multiple Russian voice models, and worked on an on-device LLM agent for Android with sub-agent delegation and tool-calling. The work spans C#, C++, Python, Kotlin, and TypeScript, covering everything from systems programming and embedded firmware to machine learning, mobile app development, and infrastructure/CI automation.

Activity timeline (last 12 months)

2026 Jun

Backtesting and AI trading engine — summit

Built out the trader backtest engine with per-trade MFE/MAE recording, slippage and fee modeling, LLM exit decisioning, and performance optimizations like O(n) replay.

Trading platform features and fixes — summit

Added membership tiers, positional trading guards, tag-based trader profiles, equity curve dashboard, Telegram integration, and fixed UI and data-fetching bugs.

Input automation scenario engine — jolt

Built an AutoHotKey alternative with interception support, configurable conditions and rule sets, and debug logging.

CV pipeline and profile automation — jamminroot

Refined the LLM-based CV generation pipeline — added voice enforcement, repo coverage controls, and improved PDF output with skill sections.

2026 May

USB HID firmware variants — j-uni-hid

Developed new firmware variants v13s8x8 for ESP32-S3 and v13 with expanded USB HID event emission, and added PlatformIO support.

Windows input filter driver — input-driver

Reworked the Interception-class WDK driver with push-style event delivery, hardware ID and event type filtering, and an integration test suite.

Windows file-tagging utilities — intag2

Fixed UTF-16 LE encoding for desktop.ini to render non-ASCII folder tags correctly, and added .pdf file type to the context menu.

Android TTS engine work — j-tts-android

Added question/exclamation intonation sliders, integrated F5-TTS and Piper engines, improved text normalization with RuNorm, and built mmap-based model loading.

Aim-assist tool refinement — MEMU3

Switched YOLO inference to DirectML, dropped unused classes, and reworked the bow/flick mechanism with bezier motion and closed-loop tracking.

Knowledge base firmware — biscuit

Added a knowledge base app, FB2 reader, screensaver folder, and Mesh Chat fixes to the e-ink device firmware.

2026 Apr

Trading platform infrastructure — summit

Continued backtest engine enhancements including published track records and user filtering, plus scanner pair resolution fixes.

USB HID firmware fix — j-uni-hid

Fixed a disconnect issue in the v13 firmware variant.

E-ink device firmware apps — papyrix

Built map and knowledge base apps with tile rendering, FB2 encoding fixes, and an icon-based home screen for the custom e-reader firmware.

Proxy client enhancements — FICLash

Added XHTTP transport support and re-exposed provider APIs via a Mihomo fork.

Aim-assist debug overlay — MEMU3

Added HP-based aim scaling, debug overlay window, and YOLO confidence threshold UI.

2026 Mar

Crypto price model research — crypto-model-research

Ran hundreds of experiments with Mixture-of-Experts architectures, snapshot ensembles, and temperature scaling; achieved best combined F1 of 0.7817.

On-device LLM agent development — ozwil-android

Rewrote sub-agent architecture with session-based delegation, added Qwen 3.5 models, KV cache reuse, wake processing service, and tool-safety rails.

Trading platform AI engine — summit

Implemented LLM-based entry/exit decision modes with configurable strategy phases deep integration.

E-ink launcher app — blackboard-launcher

Built an Android launcher for e-ink devices with swipe page navigation, note-taking focus, and status bar control.

Aim-assist polish — MEMU3

Rewrote overlay to D3D11, added linger mode, autofire, and HID click emulation.

2026 Feb

Windows file-tagging release pipeline — intag2

Overhauled CI to automate builds, CHANGELOG generation, and Microsoft Store publishing — fixed multiple API issues and release workflows.

Code intelligence engine — jaxon

Expanded language support to C++, Go, Rust; added LSP integration, incremental sync, and improved dead code detection for DI frameworks.

Telegram automation node — n8n-nodes-telepilot-2

Stabilized an n8n node for Telegram automation — fixed auth race conditions, CI pipeline issues, and added album trigger support.

YOLO labeling tool — yolo-labeler

Built a fast on-host YOLO labeler with multi-select mark mode and keyboard shortcuts.

Neovim config and dotfiles — .dotfiles

Migrated to Neovim 0.11+ LSP API, added OSC 52 clipboard support, and fixed treesitter parser setup.

Trading monitor app — freqtrade_monitor

Polished a Flutter-based freqtrade monitoring app with glassy cards, winrate charts, and import/export features.

Trading bot monitor app — freqtrade-tg-multibot

Added web project with Docker support, improved daily profit calculations, and enhanced Telegram authentication.

2026 Jan

Poker computer vision pipeline — poker-cv

Achieved high-accuracy hand and board card detection — added recovery module, interpreted timeline visualization, and comprehensive testing.

USB HID updates — j-uni-hid

Added graceful COM restart handling to the firmware.

Task management app — tasker

Built an Android tasker with touch event visualization and direct launch features.

2025

Crypto trading strategies — freqtrade_strategies

Iterated extensively on freqtrade strategy parameterization — added, refactored, and backtested dozens of variants with optimized entry/exit signals and leverage settings.

Trading bot Telegram dashboard — freqtrade-tg-multibot

Built a C# web application for monitoring freqtrade bots via Telegram with Docker support, daily profit calculations, and authentication.

Telegram assistant bot — pAssistant

Maintained a Telegram automation tool for content curation, with webhook integration, image deduplication, and multi-target sending.

USB HID firmware evolution — j-uni-hid

Developed multiple firmware versions (v9-v12) for ESP32-S3 — added BLE+USB dual protocols, performance modes, swipe fixes, and Android support.

AI coding agent tooling — auto-claude

Extended a multi-session AI coding assistant with squash-merge, git rules system, task IDs, and completion tracking.

Trading platform foundations — summit

Began early work on the SaaS crypto trading platform — setting up the backtest engine core, trading guard system, and initial UI components.

Aim-assist tooling — MEMU3

Developed an aim-assist tool with USB-HID interaction, rate limiting, and mode support.

Telegram n8n node work — n8n-nodes-telepilot-2

Maintained an n8n node for Telegram automation — added Docker deployment, Alpine support, and auth fixes.

2024

Telegram assistant bot — pAssistant

Maintained a Telegram content automation tool — added logging, error handling, and summarization features.

Crypto trading strategies — freqtrade_strats

Developed and optimized multiple freqtrade trading strategies with hyperparameter tuning and leverage adjustments.

Windows file-tagging utility — intag

Updated the Windows Explorer file-tagging tool with CLI support, UI polish, and mutex logging.

Miscellaneous tooling — notes

Started personal notes repository.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 9 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews —

adopted across the team.

- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

freqtrade_strategies · Python

Collection of Freqtrade trading strategies with optimized parameters.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.
