

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-08-24

I built and iterated on Summit, a SaaS crypto algo trading platform with AI/neural network components, adding notification infrastructure, wallet group features, and prediction research while performing large-scale refactoring and release management. I developed firmware for USB HID emulation on ESP32-S3, progressing through multiple versions with features like fire-and-forget event emitting and matrix variants, and built a Windows input filter/injection driver from scratch with push-style event delivery and integration testing.

In parallel, I conducted extensive research on crypto price prediction models, testing cross-pair generalization and drift detection, and developed an Android TTS app with multiple engine support. I built the OzWil LLM-powered phone assistant with sub-agent delegation, and created the JAW agentic worker framework with Telegram integration and memory management. I maintained the intag2 Windows file-tagging utility, worked on poker CV analysis, trading strategies for Freqtrade, and various e-ink firmware projects.

Earlier in the window, I developed an autonomous coding agent (auto-claude), a Telegram multi-bot for Freqtrade monitoring, and a personal assistant bot, along with a Flutter app for trading bot monitoring.

Activity timeline (last 12 months)

2026 Aug

Summit platform development — summit

Built notification infrastructure, wallet group features, and prediction research for the Summit crypto algo trading platform; performed large-scale refactoring and release management.

Crypto prediction model research — crypto-model-research

Conducted research on crypto price prediction models: tested cross-pair generalization, drift detection, and meta-logreg filtering; maintained live paper trading.

JAW agentic worker — agent-harness

Built the JAW agentic worker: implemented Telegram threading, memory management, workflow presets, and a graphical control room.

2026 Jul

intag2 maintenance — intag2

Fixed metadata write errors, added Vorbis comment support for audio files, and improved CI pipeline for the Windows Explorer file-tagging utility.

Freqtrade strategy development — freqtrade_startegies

Developed new trading strategies: pack-relative reversion and BTC-relative-strength variants with backtesting results.

2026 Jun

CV generation tool enhancements — jamminroot

Enhanced the personal CV generation tool: added skills section, improved heatmap and timeline rendering, and refined LLM prompts.

EwoDip strategy variants — freqtrade_startegies

Developed EwoDip15m trading strategy variants with DCA and trend regime guards.

jolt automation tool — jolt

Built the jolt automation tool: implemented scenario engine with typed actions, conditions, and stateless themes.

2026 May

USB HID firmware v13 — j-uni-hid

Developed firmware for USB HID emulation on ESP32-S3: added fire-and-forget event emitting, 8x8 matrix variant, and platformio support.

Windows input driver — input-driver

Built a Windows input filter/injection driver: implemented push-style event delivery, integration test runner, and per-event blocking.

intag2 encoding fix — intag2

Fixed desktop.ini encoding for non-ASCII characters in the file-tagging utility.

Android TTS app — j-tts-android

Developed Android TTS app: integrated multiple TTS engines, added pitch control, and improved text normalization.

CV tool project cards — jamminroot

Added project cards with pulse charts and improved workflow rebase retries to the CV generation tool.

MEMU3 computer vision — MEMU3

Switched YOLO inference to DirectML, implemented bow/flick tracking with user-input compensation.

biscuit e-ink firmware — biscuit

Added Knowledge Base app and FB2 reader to the biscuit e-ink firmware.

2026 Apr

Firmware variant and fixes — j-uni-hid

Drafted new firmware variant and fixed device disconnection issues for the USB HID emulation project.

Changelog fix — intag2

Fixed changelog generation in the intag2 release workflow.

papyrix firmware features — papyrix

Added map app with tile viewer, knowledge base with taxonomy browser, and optimized rendering for Apple Silicon on the e-ink device firmware.

Aim assist enhancements — MEMU3

Enhanced MEMU3 aim assist: added HP-based aim scaling and debug overlay window.

FICLash proxy update — FICLash

Updated FICLash proxy client: bumped Clash.Meta version and added XHTTP transport support.

Clash.Meta API exposure — Clash.Meta

Re-exposed ProxiesWithProviders and GetProxyNameList APIs in the Clash.Meta fork.

2026 Mar

Firmware v12/v13 release — j-uni-hid

Released v12 and v13 firmware versions for USB HID emulation on ESP32-S3.

OzWil LLM app — ozwil-android

Developed OzWil Android app: implemented sub-agent delegation architecture, model settings UI, and background service for LLM inference.

OzWil API backend — ozwil-api

Built the OzWil API backend: added tool safety rails and MarkdownText composable for chat UI.

Map app and FB2 support — papyrix

Added map app with landscape UI and fixed FB2 encoding support for the papyrix firmware.

Overlay rewrite and linger mode — MEMU3

Rewrote MEMU3 overlay using D3D11/D2D/DComp, added linger mode and autofire features.

Blackboard launcher — blackboard-launcher

Improved Blackboard launcher for E-ink devices: overhauled backdrop, added swipe page navigation, and status bar control.

2026

Poker CV analysis — poker-cv

Worked on computer vision analysis for online poker: achieved high hand detection accuracy, implemented state recovery, and built a pipeline for video-to-hand-history conversion.

2025

Telegram multi-bot for Freqtrade — freqtrade-tg-multibot

Built a Telegram multi-bot for monitoring multiple Freqtrade instances: implemented authentication, daily profit calculations, and Docker deployment.

Auto-claude coding agent — auto-claude

Developed an autonomous multi-session AI coding agent: added squash merging, git rules system, and task management UI.

pAssistant Telegram bot — pAssistant

Maintained a personal Telegram assistant bot: added summarization, multi-target sending, and image deduplication features.

Freqtrade monitor app — freqtrade_monitor

Built a Flutter app for monitoring Freqtrade trading bots: implemented profit charts, card UI, and import/export settings.

2024

pAssistant early development — pAssistant

Initial development of the personal Telegram assistant bot: implemented logging, error handling, and content forwarding.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 11 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/

Mattermost clients).

- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

Last 12 months on GitHub: 4,925 contributions · 4,628 public commits · 85 PRs · 180 reviews. Generated 2026-08-24.
