

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-07-06

Built and iterated on Summit, a SaaS crypto algo-trading platform with AI/ML integration, focusing on the dashboard, admin tools, notification templates, billing, and strategy management. Reworked the backtesting pipeline, added per-strategy commission billing, and improved the trading engine's PnL matching and ROI display. Also developed j-uni-hid, a feature-rich USB HID firmware for ESP32-S3, adding new device variants, performance modes, and fixing connectivity issues. Worked on input-driver, a Windows kernel-mode input filter driver, adding event listeners, integration tests, and library predicates.

Conducted extensive research on crypto price prediction models, experimenting with Mixture-of-Experts architectures, attention mechanisms, and ensemble methods, achieving new best validation scores. Built poker-cv, a computer vision pipeline for extracting poker hand data from video, achieving high accuracy on card and hand detection. Developed intag2, a Windows Explorer file-tagging utility, fixing encoding issues, adding PDF support, and overhauling the CI/CD pipeline for Microsoft Store publishing.

Created j-tts-android, an Android TTS app with multiple engine support, pitch control, and Russian language normalization. Worked on ozwil-android, an on-device LLM app with sub-agent delegation, tool use, and background processing. Maintained various automation and tooling projects including freqtrade-tg-multibot, jamminroot (CV generation pipeline), and auto-claude.

Activity timeline (last 12 months)

2026 Jul

Summit trading platform enhancements — summit

Fixed PnL matching with exchange, improved dashboard charts and APY display, added strategy service notes and admin tools, and reworked notification templates.

Crypto model research and bundling — crypto-model-research

Exported champion Split-MoE ensemble to ONNX for Summit integration and fixed the model loader.

Trading strategy development — freqtrade_strategies

Added new pack-relative and BTC-relative reversion strategies, and documented forward-test results for existing dip-buy strategies.

2026 Jun

CV generation pipeline — jamminroot

Refined the CV generation workflow: added LLM model override, enforced first-person voice, and improved project card visuals with pulse line charts.

Jolt input automation tool — jolt

Built a minimal AutoHotKey alternative with interception support, scenario engine, and debug logging.

2026 May

USB HID firmware development — j-uni-hid

Added fire-and-forget emitting for USB HID, created a new 8x8 matrix firmware variant, and fixed device disconnection issues.

Windows input driver library — input-driver

Added push-style event listeners, integration tests, and library predicates to the kernel-mode input filter driver.

Android TTS engine work — j-tts-android

Added pitch and intonation sliders, removed proprietary engines for commercial distribution, and integrated new TTS models like TeraTTS and sherpa-onnx.

MEMU3 RnD project updates — MEMU3

Switched GPU inference from CUDA to DirectML, reworked bow/flick aiming with user-input compensation, and added debug overlay.

2026 Apr

USB HID firmware variant — j-uni-hid

Drafted a new firmware variant for the v13s8x8 matrix and fixed a device dying/disconnection bug.

E-ink reader firmware features — papyrix

Added Map and Knowledge Base apps, optimized map renderer for Apple Silicon, and fixed FB2 encoding support.

Proxy client updates — FICLash

Bumped Clash.Meta to re-expose proxy APIs and added XHTTP transport support.

2026 Mar

On-device LLM app development — ozwil-android

Rewrote sub-agent architecture with session-based delegation, added tool safety rails, and integrated new models like Qwen and LFM2.5.

Crypto model research experiments — crypto-model-research

Conducted hundreds of experiments with MoE architectures, attention mechanisms, and ensemble methods, achieving new best validation scores.

E-ink launcher project — blackboard-launcher

Built a note-taking-focused Android launcher with swipe navigation, status bar control, and Onyx SDK integration.

2026 Feb

Windows file-tagging utility CI — intag2

Overhauled CI/CD pipeline for Microsoft Store publishing, fixed folder metadata handling, and added PDF support to context menu.

Neovim dotfiles setup — .dotfiles

Set up a full Neovim IDE configuration with LSP, treesitter, and pre-commit hooks.

Code intelligence engine — jaxon

Added LSP integration, dead code detection, and expanded language support for the graph-based code analysis tool.

Telegram automation node fork — n8n-nodes-telepilot-2

Fixed auth race conditions and CI issues for the n8n Telegram node fork.

2026 Jan

Poker computer vision pipeline — poker-cv

Achieved high accuracy on hand and card detection from video, added recovery module and pipeline API.

USB HID firmware updates — j-uni-hid

Fixed graceful COM restart and added new device support for the firmware.

n8n Claude Code node — n8n-nodes-claudecode

Updated to Claude Agent SDK and fixed abort controller cleanup.

2025

Summit trading platform foundation — summit

Built the core SaaS crypto algo-trading platform with AI/ML features, including backtesting, strategy management, and dashboard.

USB HID firmware iterations — j-uni-hid

Developed multiple firmware versions (v9-v13) with BLE, USB touch, and performance modes for ESP32-S3.

Telegram bot and automation projects — freqtrade-tg-multibot

Built a Telegram bot for monitoring multiple Freqtrade instances, with authentication and profit calculations.

Auto-claude development — auto-claude

Developed an autonomous multi-session AI coding tool with squash merging, task management, and Git rules.

Trading strategy research — freqtrade_strategies

Developed and optimized numerous trading strategies with backtesting and parameter tuning.

2024

Telegram automation tools — pAssistant

Built a Telegram assistant with summarization, image deduplication, and multi-target sending.

Trading strategy exploration — freqtrade_strats

Experimented with various trading strategies and configurations for Freqtrade.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 10 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.

Last 12 months on GitHub: 3,917 contributions · 3,586 public commits · 105 PRs · 193 reviews. Generated 2026-07-06.
