

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-10-05

Built and iterated on Summit, a SaaS crypto algo-trading platform with AI/ML components — added LLM-based judge seats for quorum and sentiment analysis, reworked the copy-trading layer with kill-switch and trailing exit features, and improved wallet-group rebalancing with calm-liquidity baskets. Also developed j-uni-hid, a feature-rich mouse/keyboard emulation firmware for ESP32-S3, shipping multiple firmware variants (v11–v13) with USB HID, BLE, and matrix support, and built input-driver, a Windows WDK input filter/injection driver with push-style event delivery and integration tests.

On the research side, ran a systematic audit of crypto-model-research, cataloguing 11 distinct prediction models under a unified stack protocol, refuting several hypotheses (vol-noise, HMM state features) and keeping Mondrian conformal gates. Developed agent-harness, a Rust-based agentic worker framework with Mattermost integration, tenant/visibility models, and a web UI for managing agents and situations. Also worked on sunflower, a browser-in-a-browser platform with container orchestration, font pack management, and human-input simulation, and intag2, a Windows Explorer file-tagging utility with Matroska/WebP metadata writing and DPI-aware UI.

Polished j-tts-android, an Android TTS engine supporting multiple models (VITS, Piper, F5-TTS) with Russian language features, pitch control, and background synthesis. Advanced ozwil-android, an on-device LLM app with sub-agent delegation, tool routing strategies, and wake-word processing. Maintained various smaller projects including yolo-labeler (on-host YOLO annotation tool), papyrix (e-ink firmware with map and knowledge base apps), and jolt (AutoHotKey alternative with interception support).

Activity timeline (last 12 months)

2026 Oct

YOLO labeler updates — yolo-labeler

Added detector integration, constraint highlighting, and label transparency features to the on-host YOLO annotation tool.

2026 Sep

LLM judge seats for Summit — summit

Built LLM-based judge seats for quorum, sentiment, and wallet-group decisions, with provider capabilities determining seat placement and TypeSafe System One integration.

Copy-trading and wallet rebalancing — summit

Reworked the copy-trading layer with kill-switch, trailing exit simulator, and honest cost display; added calm-liquidity basket rebalancing with backtest replay.

Agentic worker framework — agent-harness

Built Mattermost integration, tenant/visibility models, and a web UI for managing agents, situations, and deliveries in the Rust-based agentic worker.

Browser-in-a-browser platform — sunflower

Added container orchestration features: font pack management, human-input simulation, permission prompt handling, and tenant isolation with AppArmor profiles.

File-tagging utility updates — intag2

Added Matroska and WebP metadata writing, DPI-aware UI scaling, and context menu support for Ogg/Matroska audio files.

YOLO labeler features — yolo-labeler

Implemented label UI, mosaic view, RMB zoom, and filter capabilities for the on-host annotation tool.

2026 Aug

Crypto model research audit — crypto-model-research

Ran a systematic audit of 11 prediction models under a unified stack protocol, refuting vol-noise and HMM state hypotheses, and keeping Mondrian conformal gates.

Agentic worker development — agent-harness

Added Mattermost native connector, tenant/visibility models, session-based delegation, and a web UI for managing agents and situations.

Browser platform improvements — sunflower

Implemented human-input simulation, permission prompt handling, tenant isolation, and deployment pipeline for the browser-in-a-browser platform.

File-tagging utility fixes — intag2

Fixed settings persistence, Explorer refresh, and backdrop fallback issues; added Vorbis comment writing for Ogg files.

2026 Jul

Trading strategy development — freqtrade_strategies

Added pack-relative and BTC-relative reversion strategies, and EWO dip-buy variants with DCA averaging and trend regime guards.

File-tagging utility release — intag2

Bumped to v2.5 with Vorbis comment writing for Ogg files and fixed shell extension uninstall path.

2026 Jun

CV automation and profile updates — jamminroot

Reworked the CV generation pipeline with LLM guidance, importance tagging, and heatmap visualization; updated profile with skills section.

AutoHotKey alternative — jolt

Built a minimal AutoHotKey alternative with interception support, scenario engine, typed actions, and stateless themes.

2026 May

USB HID firmware development — j-uni-hid

Added fire-and-forget emitting for USB HID and an 8x8 matrix variant for the ESP32-S3 firmware.

Windows input driver — input-driver

Added push-style event delivery with JidStartListener/JidStopListener and integration tests covering all documented capabilities.

Android TTS engine — j-tts-android

Added pitch control, F5-TTS engine scaffold, and Russian Piper voices via sherpa-onnx; removed proprietary engines for commercial distribution.

Aim assist tool updates — MEMU3

Refactored YOLO inference to DirectML, added bow/flick tracking with bezier motion, and improved debug overlay.

2026 Apr

Summit admin and prediction fixes — summit

Added backtest configurator with versioned configs and fixed prediction model window loading with slack in bars.

USB HID firmware variant — j-uni-hid

Drafted a new firmware variant (v13s8x8) and fixed a dying/disconnect issue in the v13 firmware.

E-ink firmware features — papyrix

Added map app with region selection, knowledge base with taxonomy browser, and FB2 encoding fixes for the custom e-ink firmware.

Aim assist tool updates — MEMU3

Added HP aim scaling with YOLO bbox, debug overlay window, and runtime fallback from Interception to USB-HID.

Proxy client updates — FICLash

Bumped Clash.Meta with re-exposed APIs and added XHTTP transport support via rebased mihomo.

2026 Mar

On-device LLM app — ozwil-android

Rewrote sub-agent architecture with session-based delegation, tool routing strategies, and wake-word processing; added Qwen models and background service.

E-ink launcher — blackboard-launcher

Built a note-taking-focused Android launcher for e-ink readers with backdrop overhaul, swipe navigation, and status bar control.

Aim assist tool updates — MEMU3

Rewrote overlay to D3D11+D2D+DComp, added status window, and restricted aim assist to focused window.

E-ink firmware map app — papyrix

Rewrote map app UI with landscape orientation, right-edge hints, and scale bar; added PDF/DjVu conversion script.

2026 Feb

n8n Telegram node fork — n8n-nodes-telepilot-2

Fixed auth race condition, upgraded CI test version, and added retry logic for npm install in the Telegram node fork.

Code intelligence engine — jaxon

Added LSP integration, index freshness detection, and expanded framework coverage for dead code detection in the graph-powered code analysis tool.

Neovim config — .dotfiles

Set up initial Neovim config with full IDE setup, LSP, treesitter, and pre-commit hooks.

File-tagging utility release — intag2

Restructured release pipelines for manual triggering and fixed MS Store publish workflow with PowerShell REST API.

YOLO labeler init — yolo-labeler

Initialized the on-host YOLO annotation tool with multi-select mark mode and Ctrl+Delete deletion.

2026 Jan

Poker CV pipeline — poker-cv

Refactored the poker computer vision pipeline with generator-based recovery, interpreter integration, and improved hand/board card detection.

n8n Telegram node fixes — n8n-nodes-telepilot-2

Fixed TDLib session storage and restored required API parameters for the Telegram node.

Tasker app — tasker

Initialized a task management app with touch event visualization and improved UX for direct launch.

2025

Summit development — summit

Continued building the crypto algo-trading platform with AI components, focusing on copy-trading and wallet management features.

USB HID firmware — j-uni-hid

Developed multiple firmware variants (v9–v11) for ESP32-S3 with USB HID, BLE, and touch support.

Crypto model research — crypto-model-research

Conducted research on crypto price prediction models, including HMM and conformal prediction approaches.

Trading strategies — freqtrade_startegies

Developed and optimized multiple trading strategies with pattern confirmation and parameter tuning.

Telegram automation tools — pAssistant

Built a Telegram assistant with summarization, image deduplication, and multi-target sending features.

Auto-claude development — auto-claude

Added squash-merge, git rules system, and task ID features to the autonomous multi-session AI coding tool.

Freqtrade monitor app — freqtrade_monitor

Built a Flutter-based monitoring app for Freqtrade with charts, cards, and import-export functionality.

Multi-bot Telegram tool — freqtrade-tg-multibot

Developed a Telegram bot for managing multiple Freqtrade instances with authentication and profit tracking.

2024

Telegram assistant — pAssistant

Initialized and iterated on a Telegram assistant with summarization, forwarding, and logging features.

Freqtrade multi-bot tool — freqtrade-tg-multibot

Started development of a Telegram bot for managing multiple Freqtrade instances.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs 1 mo

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

sunflower · Go

A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

Last 12 months on GitHub: 5,398 contributions · 5,115 public commits · 71 PRs · 180 reviews. Generated 2026-10-05.
