

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-10-12

I built and iterated on Summit, a SaaS crypto algo trading platform with AI and neural network components, focusing on wallet group management, LLM-based judge systems for quorum and sentiment, rebalance strategies, and follows features. I also developed j-uni-hid, a feature-rich mouse and keyboard emulation firmware for ESP32-S3, progressing through multiple versions with USB HID, BLE, and performance improvements. Additionally, I created input-driver, a Windows kernel-level input filter driver for capture and injection, with a library API and integration tests.

In parallel, I conducted extensive research on crypto price prediction models in crypto-model-research, building a unified evaluation protocol, drift monitoring, and conformal prediction experiments. I worked on agent-harness, an agentic worker framework in Rust, integrating Mattermost, defining agent schemas, and building a web UI. I also developed sunflower, a browser-in-browser system with container management, human input simulation, and font delivery.

Other projects include j-tts-android, a TTS app with multiple engine support and Russian language features; ozwil-android, an on-device LLM with phone capabilities; poker-cv, a computer vision pipeline for online poker; and intag2, a Windows file tagging utility with metadata writing and UI improvements. I also maintained various automation tools, dotfiles, and CI pipelines.

Activity timeline (last 12 months)

2026 Oct

Wallet groups and auth improvements — summit
Built scheduled wallet group resize proposals and extended session persistence; improved scanner performance by skipping already-evaluated lanes.

YOLO labeler updates — yolo-labeler
Added validator functionality and general updates to the on-host YOLO labeling tool.

2026 Sep

LLM judge system and wallet limits — summit
Implemented System One judge seats for quorum and sentiment, provider capabilities for seat placement, and

wallet group limit defaults.

Agentic worker Mattermost integration — agent-harness
Built Mattermost connector with channel directory, REST API access, and background sync; defined schema for nodes, providers, and agents.

File tagging UI and format support — intag2
Added user zoom level, window resizing, Matroska and WebP tag writing, and DPI-aware UI scaling.

Browser management and font delivery — sunflower
Implemented font packs as mounted volumes, browser claiming, proxy password handling, and exit probing for launches.

Labeling tool enhancements — yolo-labeler
Added label transparency, mosaic view, RMB zoom, and constraint highlighting.

2026 Aug

Rebalance and follows features — summit
Developed calm-liquidity backtest replay, interactive exit simulator, honest cost tracking, and position backfill from candles.

Crypto price model research — crypto-model-research
Conducted model catalog rebuild, drift monitoring, conformal prediction experiments, and Summit validation report response.

Agent architecture and UI development — agent-harness
Built agent memory, notification system, workspace editing, admin page, and preset-first web UI with hybrid memory.

Settings persistence and Explorer integration — intag2
Fixed settings persistence, Explorer refresh, and backdrop fallback; improved metadata write error handling.

Deploy and human input simulation — sunflower
Implemented human-like movement planning, gesture-to-action translation, permission prompt answering, and TLS termination on PVE.

2026 Jul

Audio metadata writing and uninstall fix — intag2
Added Vorbis comments for Ogg/Opus files and fixed shell extension removal from GUI uninstall path.

New trading strategies — freqtrade_startegies
Added pack-relative and BTC-relative reversion strategies, and EWO dip-buy variants with DCA averaging.

2026 Jun

CV pipeline and heatmap development — jamminroot
Built automated CV generation pipeline with LLM guidance, heatmap visualization, and project cards with pulse charts.

AutoHotKey alternative development — jolt
Created scenario engine with typed actions, input gate, interception support, conditions, rules, and stateless themes.

Strategy research and optimization — freqtrade_startegies
Developed EwoDip15m leveraged dip-buy strategy and documented forward-test results.

2026 May

Firmware v13 with USB HID improvements — j-uni-hid
Implemented fire-and-forget event emission for USB HID, added 8x8 matrix variant, and fixed disconnection issues.

Windows input filter driver library — input-driver
Built push-style event delivery API, integration test runner, and per-event blocking with library predicates.

Android TTS engine expansion — j-tts-android
Added F5-TTS, GPT-SoVITS, Fish-Speech scaffolds, pitch control, Piper TTS via Kotlin G2P, and RuNorm text normalisation.

Aim assist and YOLO inference updates — MEMU3
Switched GPU inference to DirectML, added bow/flick tracking with user-input compensation, and debug overlay.

E-reader firmware enhancements — biscuit
Added Knowledge Base app, FB2 reader with encoding support, screensaver folder, and Mesh Chat fixes.

CV automation and workflow improvements — jamminroot
Refined CV generation with importance tags, heatmap weekly rows, and workflow rebase retries.

2026

Firmware iterations v10-v12 — j-uni-hid
Developed dual-core v12 and USB v13 firmware, added new devices, BLE improvements, and self-reporting features.

Computer vision for online poker — poker-cv
Built CV pipeline for poker state recovery, hand detection, board card accuracy, and log reconstruction for validation.

On-device LLM with phone capabilities — ozwil-android
Implemented sub-agent delegation, tool routing strategies, model keep-alive, and setup wizard for offline LLM on Android.

File tagging feature expansion — intag2
Added PDF support, metadata properties, Microsoft Store publishing pipeline, and desktop.ini encoding fixes.

E-reader custom firmware — papyrix
Added Map app with tile viewer, Knowledge Base with taxonomy browser, FB2 encoding support, and PDF/DjVu conversion.

E-ink launcher for note-taking — blackboard-launcher
Built Android launcher with backdrop overhaul, swipe navigation, status bar control, and Onyx SDK integration.

2025

Firmware v11 and earlier versions — j-uni-hid
Developed v11 firmware with USB touch, BLE profiles, performance modes, and Android reconnect fixes.

Autonomous AI coding tool — auto-claude
Built multi-session AI coding assistant with git rules system, squash merging, worktree management, and task ID tracking.

Trading strategy development — freqtrade_startegies
Created and optimized numerous trading strategies with pattern confirmation, leverage settings, and backtesting.

Telegram bot for trading — freqtrade-tg-multibot
Developed Telegram bot with web application, Docker support, daily profit calculations, and authentication handling.

Telegram assistant bot — pAssistant
Built multi-target sending, summarization, image deduplication, and redirection features for a Telegram bot.

n8n Telegram nodes — n8n-nodes-telepilot-2
Maintained n8n community nodes for Telegram, fixed auth race conditions, added album trigger, and improved CI.

2024

Telegram bot initial development — pAssistant
Started Telegram assistant bot with message forwarding, logging, and error handling.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs 1 mo

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.

- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos

Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#
SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++
Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C
Windows input filter and injection driver similar to Interception.

crypto-model-research · Python
R&D project for crypto price prediction models.

agent-harness · Rust
Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python
Computer vision experiments for online poker platforms.

intag2 · C++
Assign tags to files and folders in Windows Explorer.

sunflower · Go
A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin
Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin
LLM-powered Android assistant with phone control capabilities.

Last 12 months on GitHub: 5,408 contributions · 5,129 public commits · 67 PRs · 180 reviews. Generated 2026-10-12.
