

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-09-21

I continued building the Summit crypto algo trading platform, adding LLM-based judge seats for quorum and sentiment analysis, rebalancing logic, and copy trading features. The platform now integrates AI-driven decision-making with wallet group limits and proposal severity defaults. I also developed the j-uni-hid firmware for ESP32-S3, adding new device variants, USB HID improvements, and BLE performance profiles.

I created the input-driver Windows kernel-mode filter driver for input injection and capture, releasing v1.2 with push-style event delivery and integration tests. On the research side, I conducted extensive crypto price prediction model experiments, auditing defects and establishing a unified stack protocol for model ranking.

I built the JAW agentic worker framework with Mattermost integration and tenant visibility, and the sunflower browser-in-browser infrastructure with permission handling and human input simulation. I worked on several Android projects: the j-tts-android TTS engine with multiple model support and pitch control, and the ozwil-android on-device LLM app with sub-agent delegation and tool routing.

I maintained the intag2 Windows file-tagging utility, adding Vorbis comment support and fixing metadata persistence. I refined the poker-cv computer vision pipeline for online poker, achieving high hand detection accuracy, and developed trading strategies for freqtrade. I also improved my CV generation pipeline with better LLM guidance and project cards.

Activity timeline (last 12 months)

2026 Sep

AI-driven crypto algo trading platform — summit

Continued development of the Summit platform, focusing on LLM-based judge seats, quorum logic, and wallet group limits.

Agentic worker framework — agent-harness

Built out the Mattermost integration, process feed reading, and tenant visibility model for the JAW agentic worker.

Browser-in-browser infrastructure — sunflower

Fixed font pack issues, container adoption, and proxy password handling; added features for browser lifecycle

management and font pack splitting.

2026 Aug

Summit platform refinements — summit

Continued work on Summit: rebalance logic, copy trading fixes, and wallet group veto mechanics.

Crypto price prediction research — crypto-model-research

Conducted extensive model research: audited defects, unified stack protocol, and refit runbook for crypto price prediction.

Agent harness development — agent-harness

Developed the agent harness: private chat handling, notification following, and workspace build on Windows.

File-tagging utility maintenance — intag2

Maintained the Windows file-tagging utility: fixed settings persistence, Explorer refresh, and backdrop fallback.

Browser-in-browser enhancements — sunflower

Enhanced the browser-in-browser system: added permission prompt answering, human input planning, and deployment improvements.

Intag documentation updates — intag

Updated documentation and changelog for the intag file-tagging project.

2026 Jul

Intag2 audio metadata support — intag2

Continued work on intag2: added Vorbis comment writing for audio files and fixed metadata write failures.

Trading strategy development — freqtrade_strategies

Developed new trading strategies: pack-relative reversion and BTC-relative reversion variants.

2026 Jun

CV pipeline improvements — jamminroot

Enhanced the CV generation pipeline: added LLM model override, improved voice enforcement, and split guidance per place.

Strategy iteration — freqtrade_strategies

Continued strategy development: added EwoDip15m variants with DCA and trend regime.

AutoHotKey alternative — jolt

Built the jolt AutoHotKey alternative: added conditions, rules, stateless themes, and sound actions.

2026 May

ESP32-S3 firmware development — j-uni-hid

Developed firmware for ESP32-S3: added fire-and-forget USB HID events and 8x8 matrix variant.

Windows input filter driver — input-driver

Released v1.2 of the Windows input filter driver: added push-style event delivery and integration-test runner.

Android TTS engine — j-tts-android

Worked on Android TTS: added question/exclamation intonation, removed deprecated engines, and added pitch control.

CV pipeline enhancements — jamminroot

Continued CV pipeline work: added project cards with pulse charts and workflow rebase retries.

CV-based aim assist — MEMU3

Refined the CV-based aim assist: switched YOLO inference to DirectML, added bow/flick features, and improved overlay.

E-ink firmware update — biscuit

Added knowledge base and FB2 reader to the e-ink firmware.

2026 Apr

Firmware variant drafting — j-uni-hid

Continued firmware development: drafted v13s8x8 variant and fixed dying/disconnect issues.

Intag2 encoding fix — intag2

Fixed desktop.ini encoding for non-ASCII characters and updated changelog generation.

E-ink reader firmware — papyrix

Enhanced e-ink reader firmware: added map app with tile viewer, knowledge base app, and FB2 encoding fixes.

Clash.Meta fork — FIClash

Updated Clash.Meta fork: re-exposed APIs and added XHTTP transport support.

Clash.Meta API exposure — Clash.Meta

Re-exposed APIs for FIClash.

2025

Firmware v11 features — j-uni-hid

Continued firmware development: worked on v11 features including self-reporting, performance profiles, and BLE improvements; also fixed Android reconnection and touch issues.

Poker CV pipeline — poker-cv

Developed computer vision pipeline for online poker: achieved high hand detection accuracy, added board card detection, and implemented log reconstruction.

File-tagging utility maintenance — intag2

Maintained the file-tagging utility: added PDF support, fixed folder metadata persistence, and automated release workflows.

On-device LLM Android app — ozwil-android

Built the on-device LLM Android app: implemented sub-agent architecture, tool routing strategies, and model keep-alive.

2024

Telegram assistant bot — pAssistant

Maintained the Telegram assistant bot: added summarization, multi-target sending, and various bug fixes.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

sunflower · Go

A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

Last 12 months on GitHub: 5,373 contributions · 5,084 public commits · 76 PRs · 181 reviews. Generated 2026-09-21.
