

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-09-28

Over the past year, the bulk of the work has been on Summit, a SaaS crypto algo-trading platform with an AI twist. Built out its LLM judge system, introducing a System One judge seat for quorum, sentiment, and wallet-group decisions, and integrated TypeSafe provider capabilities. Also reworked the rebalancing engine, adding calm-liquidity backtesting and an interactive exit simulator for the follows system, while continuously fixing wallet-group and execution logic.

On the firmware side, advanced the J-UNI-HID project, developing v10 through v13 of the ESP32-S3 mouse and keyboard emulation firmware, adding USB touch, BLE profiles, and self-reporting. Also released v1.2 of the input-driver, a Windows kernel-mode input filter driver, adding push-style event delivery and an integration-test suite.

Across secondary projects, conducted a deep research audit on the crypto-model-research prediction model, built the agent-harness agentic worker framework with Mattermost integration, and developed the sunflower browser-in-a-browser infrastructure. Also expanded the j-tts-android TTS app with multiple new engines and pitch control, and maintained the intag2 Windows Explorer tagging utility with metadata and CI improvements.

Activity timeline (last 12 months)

2026 Sep

LLM judge and quorum system — summit

Built a System One judge seat for quorum, sentiment, and wallet-group decisions; integrated TypeSafe provider capabilities and improved judge call recording.

Agentic worker framework — agent-harness

Developed the Mattermost bridge, feed processing, and schema-driven agent communication for the Jamminroot Agentic Worker.

Browser-in-browser infrastructure — sunflower

Reworked font pack delivery, browser lifecycle management, and human-input simulation for the Sunflower remote browser platform.

YOLO labeler tooling — yolo-labeler

Added constraint highlighting, label transparency, and validation features to the on-host YOLO labeler.

2026 Aug

Rebalancing and follows engine — summit

Implemented calm-liquidity backtesting, interactive exit simulator for follows, and reworked wallet-group veto logic.

Crypto model research audit — crypto-model-research

Conducted a full research audit: unified protocol sweep, conformal prediction gates, drift monitoring, and benchmark freezing for the crypto price prediction model.

Agent harness core architecture — agent-harness

Built the core agent architecture: situations, canvas, memory search, tiered recommendations, and admin operational dashboard.

Tagging utility and browser platform — intag2

Fixed settings persistence and Explorer refresh for Intag2; added tenant fencing and operator panel deployment for the Sunflower browser-in-browser service.

2026 Jul

Intag2 release pipeline — intag2

Collapsed the release workflow, added Vorbis comment writing for audio files, and fixed uninstall path issues.

Trading strategy iteration — freqtrade_startegies

Added several new 15m trading strategy variants with documented forward-test performance.

2026 Jun

CV generation pipeline — jamminroot

Reworked the CV generation pipeline: added dry-run mode, split LLM guidance, refined importance tagging, and improved heatmap rendering.

Jolt automation utility — jolt

Built the scenario engine for Jolt, a minimal AutoHotKey alternative, with interception support, conditions, and sound actions.

Strategy backtesting — freqtrade_startegies

Added and documented new EwoDip and reversion strategy variants for the freqtrade backtesting suite.

2026 May

HID firmware and input driver — j-uni-hid

Developed v13 firmware for the ESP32-S3 HID device and released v1.2 of the Windows input filter driver with push-style event delivery.

Android TTS engine expansion — j-tts-android

Integrated multiple TTS engines, added pitch control, RuNorm text normalisation, and question/exclamation intonation sliders.

Aim assist and e-ink firmware — MEMU3

Refactored YOLO inference to DirectML for MEMU3, and added Knowledge Base app and FB2 reader to the Biscuit e-ink firmware.

CV project cards and heatmap — jamminroot

Added project cards with pulse line charts, smoothed Catmull-Rom curves, and weekly heatmap to the CV README.

2026 Apr

Firmware and e-reader apps — j-uni-hid

Drafted the v13s8x8 firmware variant and fixed USB disconnect issues; added Map app and FB2 encoding fixes to the Papyrix e-reader firmware.

Proxy client and tagging tool — FICLash

Added XHTTP transport support to the Flutter Clash.Meta client and fixed desktop.ini encoding for non-ASCII characters in Intag2.

2025

Summit platform foundation — summit

Continued building the core Summit crypto trading platform, laying groundwork in LLM integration, wallet

management, and execution logic.

HID firmware development — j-uni-hid

Developed firmware versions v10 through v12 for the ESP32-S3, adding USB touch, BLE profiles, dual-core support, and self-reporting.

Mobile and desktop applications — ozwil-android

Built the Ozwil Android LLM app with sub-agent architecture, developed the poker-cv computer vision pipeline, and expanded the intag2 file-tagging utility with PDF support and MS Store publishing.

Tooling and infrastructure — auto-claude

Built the auto-claude autonomous coding agent, the jaxon code intelligence engine, the freqtrade multi-bot Telegram interface, and maintained various n8n nodes and dotfiles.

2024

Bot maintenance — pAssistant

Maintained the pAssistant Telegram bot and the .NET ChatGPT Telegram bot with general updates and bug fixes.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos

Akvelon (vendor for Microsoft) · Full-time

Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos

ICVR · Full-time

United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos

Konstanta, LLC · Full-time

Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

sunflower · Go

A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.
