

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-07-13

I built and maintained the Summit crypto algo trading platform, an AI-driven SaaS application with a Telegram admin mini-app, backtest analysis, adaptive strategy layers, and live dashboard widgets. I also developed firmware for USB HID emulation on ESP32-S3 (j-uni-hid) and a Windows input filter driver (input-driver) for low-level event capture and injection.

On the Android side, I worked on j-tts-android, a multi-engine TTS app with custom accent and intonation control, and ozwil-android, an on-device LLM agent with sub-agent delegation and tool-use capabilities. I also refactored the intag2 file-tagging utility for Windows Explorer and improved its CI/CD pipeline for Microsoft Store publishing.

In parallel, I researched crypto price prediction models (crypto-model-research), iterating on ensemble architectures and forward-testing a champion with 77-90% win rate. I contributed new trading strategies to freqtrade_strategies, and maintained the jamminroot CV automation tool that generates dynamic PDFs and activity timelines from GitHub data.

Activity timeline (last 12 months)

2026 Jul

Summit platform enhancements — summit

Built the Telegram admin mini-app, added Named Analysis engine with backtest correlation, adaptive strategy gates and modifiers, risk dashboard widgets, and fixed various billing and UI issues.

Crypto price model research — crypto-model-research

Forward-tested a 13-feature champion model with 77-90% win rate, productionized ONNX ensemble export, and experimented with Split-MoE gate architectures.

2026 Jun

CV automation tooling — jamminroot

Refined the CV generation pipeline: added skills section, rewrote role bullets from commit analysis, and improved heatmap and timeline rendering.

Lightweight AHK alternative — jolt

Built a minimal AutoHotKey alternative with interception support, scenario engine, typed actions, and a debug log.

2026 May

Windows input filter driver — input-driver

Developed a KMDF input filter driver with capture and injection, added push-style event delivery, integration-test runner, and per-event blocking support.

Android TTS with multiple engines — j-tts-android

Added F5-TTS, GPT-SoVITS, and Piper engine scaffolds, implemented pitch control, RuNorm, and question/exclamation intonation sliders.

Aim-assist tooling — MEMU3

Refactored YOLO inference to DirectML, added bow/flick tracking with user-input compensation, and improved debug overlay.

Telegram content collector — jContentCollector

Added ad filtering, webhook support, and ignored channels to the Telegram content collector.

2026 Apr

USB HID firmware — j-uni-hid

Fixed USB disconnect issues and started drafting the v13 firmware variant with 8x8 matrix support.

File tagging for Windows Explorer — intag2

Preserved existing desktop.ini entries when writing folder metadata, fixed changelog generation, and added PDF support to context menu.

E-ink reader firmware — papyrix

Added Map and Knowledge Base apps, optimized map renderer for Apple Silicon, and fixed FB2 encoding support.

Proxy client updates — FICLash

Bumped Clash.Meta to re-expose proxy APIs and added XHTTP transport support via rebased mihomo fork.

2026 Mar

On-device LLM agent — ozwil-android

Rewrote sub-agent architecture with session-based delegation, added KV cache reuse, tool safety rails, and a setup wizard for model configuration.

Crypto price model experiments — crypto-model-research

Produced a champion Split-MoE ensemble, ran benchmark campaigns, and documented architecture and training pipeline.

Aim-assist tooling — MEMU3

Added linger mode, autofire, D3D11 overlay, and YOLO model integration; fixed status window and COM disconnect detection.

E-ink launcher — blackboard-launcher

Built a note-taking-centric Android launcher for E-ink readers with backdrop overhaul, swipe navigation, and Onyx SDK integration.

2026 Feb

Code intelligence engine — jaxon

Added LSP integration, dead code detection, incremental sync, and expanded language support to C++, Go, Rust, and Svelte.

Telegram n8n node fork — n8n-nodes-telepilot-2

Fixed auth race conditions, upgraded CI test version, added album trigger, and stabilized the publish workflow.

Neovim and dotfiles — .dotfiles

Set up Neovim config with full IDE, fixed treesitter and LSP for 0.11 API, and added pre-commit hooks.

2025

USB HID firmware evolution — j-uni-hid

Released v11 with BLE improvements, self-reporting, safe serial print, and reduced power consumption; fixed reconnection and touch jitter on Android.

Multi-bot Telegram monitoring — freqtrade-tg-multibot

Built a web dashboard for monitoring multiple freqtrade bots, with daily profit calculations, bot token authentication,

and Docker deployment.

Autonomous AI coding agent — auto-claude

Added squash-merging, worktree completion tracking, and Git rules system to the autonomous Claude coding agent.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 10 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.

- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.
