

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-11-02

Built the SaaS crypto algo trading platform Summit (C#), adding LLM-driven judge seats, wallet-group automation, and rebalancing signals. Developed the j-uni-hid firmware (C++) for ESP32-S3, iterating through multiple HID and BLE generations. Created the input-driver (C), a Windows kernel-mode input filter and injection driver.

Across secondary projects, built the JAW agentic worker (Rust) with a local speech engine and mesh networking, the sunflower browser-isolation platform (Go) with anti-detection and human-input simulation, and the intag2 file-tagging utility (C++) for Windows Explorer. Conducted extensive research in crypto-model-research (Python), building a unified model catalog and drift monitoring pipeline. Also developed the poker-cv computer vision pipeline (Python), the j-tts-android TTS app (Kotlin) with multiple engine support, and the ozwil-android on-device LLM app (Kotlin) with sub-agent delegation.

Other work includes the jamminroot CV generation pipeline, freqtrade_startegies trading strategy catalog, MEMU3 aim-assist project, yolo-labeler annotation tool, papyrix e-ink firmware, jaxon code intelligence engine, various n8n nodes, and dotfiles configuration. The work spans systems programming, machine learning, mobile development, and developer tooling, consistently building from scratch or deeply reworking existing systems.

Activity timeline (last 12 months)

2026 Nov

Speech and mesh networking for JAW — agent-harness
Built a local speech engine and mesh networking layer for the JAW agentic worker, adding trust boundaries and Telegram integration.

2026 Oct

Wallet groups and scanner optimization — summit
Reworked wallet-group proposal execution and session persistence; optimized the scanner to skip already-evaluated lanes.

Book memory and state snapshots — agent-harness
Investigated book memory and local inference performance; improved document handling, state snapshots, and

Telegram answer formatting.

Validator and UI improvements — yolo-labeler
Added a validator, constraint highlighting, and UI improvements to the YOLO labeler.

2026 Sep

LLM judges and wallet-group rework — summit
Built a System One judge seat and TypeSafe provider for LLM-driven decisions; reworked copy management, rebalancing, and the admin backtest configurator.

Matroska tagging and DPI scaling — intag2
Added Matroska and WebP metadata writing, monitor DPI scaling, and window resizing to the Explorer tagging utility.

Font packs and human-input simulation — sunflower
Reworked font pack delivery, container lifecycle management, and human-input simulation for the browser-isolation platform.

Stream categorisation and prompts — agent-harness
Refined stream categorisation rules, tool result handling, and prompt caching for the agentic worker.

2026 Aug

Follows, rebalance, and exit simulator — summit
Built an interactive exit simulator and trailing slider for follows; added calm-liquidity backtest replay and rebalance signals.

Model catalog and drift monitoring — crypto-model-research
Audited and catalogued 11 distinct models under a unified protocol; built drift monitoring, day reconciliation tooling, and a validation response package for Summit.

Settings and Explorer refresh fixes — intag2
Fixed settings persistence and Explorer refresh issues in the file-tagging utility.

Browser identity and movement planning — sunflower
Added browser identity reporting, permission prompt handling, and human-like movement planning; refactored the fence grant system.

2026 Jul

Vorbis tagging and CI cleanup — intag2
Added Vorbis comment writing for Ogg files and fixed the shell extension uninstall path; collapsed the release CI workflow.

Pack-relative reversion strategies — freqtrade_startegies
Added pack-relative and BTC-relative reversion strategies to the trading strategy catalog.

2026 Jun

CV pipeline and importance tags — jamminroot
Reworked the CV generation pipeline: added LLM model override, enforced voice consistency, split Deeplay roles, and switched to PRIMARY/SECONDARY/MINOR importance tags.

AutoHotKey alternative with interception — jolt
Built the jolt AutoHotKey alternative with a scenario engine, interception support, conditions, and stateless themes.

EWO dip-buy strategy family — freqtrade_startegies
Added a family of EWO dip-buy strategies with trend regimes and DCA averaging for the trading system.

2025

ESP32-S3 HID firmware generations — j-uni-hid
Built multiple firmware generations (v7-v13) for the ESP32-S3 HID emulation device, adding BLE, USB touch, and performance profiles.

Squash merge and Git rules — auto-claude
Added squash-merge support, a Git rules system, and task ID tracking to the autonomous coding agent.

USB-HID mouse emulation — MEMU3
Integrated USB-HID mouse emulation and added operating modes to the aim-assist project.

Docker deployment and auth fixes — n8n-nodes-telepilot-2

Added Docker and Alpine Linux deployment support; fixed authentication and session handling in the n8n TelePilot nodes.

Trading strategy iterations — freqtrade_startegies
Iterated on trading strategies (jNASOS, SimpleEMA, Fenix), refactoring entry signals and parameters for improved backtesting performance.

Summarization and multi-target sending — pAssistant
Added summarization, multi-target sending, and image deduplication to the Telegram assistant.

Web app and profit calculations — freqtrade-tg-multibot
Built a web application with Docker support, reworked Telegram authentication, and improved daily profit calculations for the multi-bot trading monitor.

Flutter monitoring UI — freqtrade_monitor
Built a Flutter monitoring app with glassy cards, win-rate bar charts, and import/export functionality.

Poker CV pipeline rework — poker-cv
Reworked the poker CV pipeline, achieving 99% hand detection and 97.8% board card accuracy.

Windows input filter driver — input-driver
Released v1.2 of the Windows input filter driver with HardwareId filtering, library predicates, and an integration-test runner.

TTS engine overhaul — j-tts-android
Removed legacy TTS engines, added F5-TTS and Piper support, and ported RuNorm to Kotlin for the Android TTS app.

Sub-agent architecture rewrite — ozwil-android
Rewrote the sub-agent architecture with session-based delegation, added model settings hub, and improved tool routing strategies for the on-device LLM app.

Map and Knowledge Base apps — papyrix
Added a Map app with tile viewer, a Knowledge Base app with taxonomy browser, and fixed FB2 encoding support for the e-ink reader firmware.

LSP and DI detection — jaxon
Added LSP integration, DI registration detection, and tree-sitter parsers for C++, Go, Rust, and Svelte to the code intelligence engine.

Neovim IDE configuration — .dotfiles
Set up a full Neovim IDE config with LSP, treesitter, and secret detection pre-commit hook.

Eink reader launcher — blackboard-launcher
Built the Blackboard launcher for Eink readers with Onyx SDK drawing, gesture zones, and status bar control.

Claude Agent SDK migration — n8n-nodes-claudecode
Migrated the n8n node to the Claude Agent SDK and fixed abort controller cleanup.

XHTTP transport support — FlCLash
Added XHTTP transport support via a rebased Clash.Meta fork for the Flutter Clash client.

E-ink reader firmware update — biscuit
Added a Knowledge Base app and FB2 reader to the e-ink reader firmware.

2024

Telegram assistant maintenance — pAssistant
Improved error logging, fixed forwarding bugs, and updated the store layer for the Telegram assistant.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs 2 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a

desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.

- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer
Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer
Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer
Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer
Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#
SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++
Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C
Windows input filter and injection driver similar to Interception.

crypto-model-research · Python
R&D project for crypto price prediction models.

agent-harness · Rust
Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python
Computer vision experiments for online poker platforms.

intag2 · C++
Assign tags to files and folders in Windows Explorer.

sunflower · Go
A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin
Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin
LLM-powered Android assistant with phone control capabilities.

Last 12 months on GitHub: 5,510 contributions · 5,258 public commits · 53 PRs · 167 reviews. Generated 2026-11-02.
