Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-11-09

I've been deeply engaged in building Summit, a SaaS crypto algo trading platform with AI and neural network components. The work spans the full stack: LLM-based judge systems for quorum decisions, wallet-group management with scheduled proposals, copy trading with interactive exit simulators, and a calm-liquidity backtesting framework. On the hardware side, I developed j-uni-hid, a feature-rich mouse and keyboard emulation firmware for ESP32-S3, iterating through multiple versions (v10-v13) with USB HID, BLE, and touch support. I also built input-driver, a Windows kernel-mode input filter driver using KMDF, with a user-mode library for event injection and interception.

Alongside the primary projects, I've been researching crypto price prediction models in crypto-model-research, running systematic experiments with conformal prediction, drift monitoring, and model cataloging. I built agent-harness (JAW), a Rust-based agentic worker with LAN discovery, speech synthesis via CosyVoice3, and a mesh of trusted nodes. I also worked on poker-cv, a computer vision pipeline for extracting poker hand history from video, achieving high accuracy on card and action detection. The intag2 project saw continued development of a Windows Explorer file-tagging utility with Matroska and WebP metadata writing, DPI-aware UI, and MS Store publishing pipeline fixes.

Other notable work includes sunflower, a browser-in-a-browser platform with container orchestration and human-input simulation; j-tts-android, a multi-engine TTS app for Android with Russian language support; and ozwil-android, an on-device LLM app with sub-agent delegation and tool-use capabilities. Across all projects, the work has been hands-on and varied: building from scratch, large refactors, infrastructure/CI, debugging campaigns, research/experimentation, and UX polish.

Activity timeline (last 12 months)

2026 Nov

Agentic worker mesh and speech — agent-harness

Built LAN discovery for nodes, speech synthesis via CosyVoice3, and a mesh of trusted guest nodes with security reviews and trust-hole closures.

2026 Oct

Summit wallet groups and LLM judges — summit
Implemented scheduled wallet-group resize proposals, extended session persistence, and built LLM-based judge seats for quorum and sentiment decisions.

YOLO labeler updates — yolo-labeler
Added validator, constraint highlighting, and label transparency features to the on-host YOLO labeling tool.

Agent harness decisions and document handling — agent-harness
Reworked the decide role to batch questions, improved pasted document handling with prefix cache preservation.

2026 Sep

Summit LLM providers and copy trading — summit
Built TypeSafe System One provider type, added provider-capability-based judge seat assignment, and reworked copy trading with capped derived groups and interactive exit simulator.

Intag2 metadata writing and UI scaling — intag2
Added Matroska and WebP metadata writing, DPI-aware UI scaling, and context menu support for Ogg and Matroska audio files.

Sunflower browser orchestration — sunflower
Implemented font packs as mounted volumes, tenant exit probing, human-input movement planning, and container permission prompt handling.

YOLO labeler features — yolo-labeler
Added mosaic view, RMB zoom, label UI improvements, and constraint highlight features.

2026 Aug

Summit calm-liquidity and follows — summit
Built calm-liquidity basket as paper-only signal with backtest replay, added interactive exit simulator with trailing slider and honest cost estimates.

Crypto model research audit and cataloging — crypto-model-research
Conducted systematic audit of 11 models, built unified protocol ranking, refuted several hypotheses (HMM features, conformal gates), and created one-command reconciliation tooling.

Sunflower deployment and identity — sunflower
Added browser identity tracking, AppArmor profile support, TLS termination on PVE, and operator panel as a service.

Intag2 settings and Explorer refresh fixes — intag2
Fixed settings persistence, Explorer refresh, and backdrop fallback issues.

2026 Jul

Intag2 Vorbis comments and uninstall fixes — intag2
Added Vorbis comment writing for Ogg formats, fixed silent metadata write failures, and removed shell extension from GUI uninstall path.

2026 Jun

Jolt scenario engine — jolt
Built a minimal AutoHotKey alternative with interception support, custom events, conditions, rules, and stateless themes.

CV automation and README overhaul — jamminroot
Reworked the CV generation pipeline with importance tags, heatmap, timeline markdown, and PDF generation with project cards.

Freqtrade strategy development — freqtrade_startegies
Developed multiple 15m EWO dip-buy and pack-relative reversion strategies with forward-test documentation.

2026 May

Input driver library and integration tests — input-driver
Added push-style event delivery, library predicates, and a comprehensive integration-test runner covering all documented capabilities.

J-uni-hid v13 firmware — j-uni-hid
Developed v13 firmware with fire-and-forget USB HID emitting and an 8x8 matrix variant for ESP32-S3.

Android TTS multi-engine overhaul — j-tts-android
Removed several TTS engines, added F5-TTS and GPT-SoVITS scaffolds, implemented pitch control, and integrated RuNorm text normalization.

MEMU3 GPU inference and bow/flick — MEMU3
Switched YOLO inference from CUDA to DirectML, added closed-loop tracking flick with bezier motion and user-input compensation.

2026 Apr

Summit admin and backtesting — summit
Added admin backtest configurator with versioned configs, fixed copy trading kill-switch and exchange account keying.

J-uni-hid v13 draft and fixes — j-uni-hid
Drafted v13s8x8 firmware variant and fixed device disconnection issues.

Papyrix map and knowledge base apps — papyrix
Added Map app with tile viewer and region selection, Knowledge Base app with taxonomy browser, and FB2 encoding fixes.

FlClash XHTTP transport — FlClash
Added XHTTP transport support via rebased mihomo fork and bumped Clash.Meta.

2026 Mar

OzwiL Android sub-agent architecture — ozwil-android
Rewrote sub-agent architecture with session-based delegation, tool routing strategies, and model refusal detection as delegation triggers.

MEMU3 overlay and YOLO confidence UI — MEMU3
Rewrote overlay to D3D11+D2D+DComp, added YOLO confidence threshold UI, and runtime fallback from Interception to USB-HID.

Papyrix map UI and PDF conversion — papyrix
Rewrote Map app UI for landscape orientation, added PDF/DjVu to XTCH conversion script.

Blackboard launcher for Eink — blackboard-launcher
Built an Android launcher for Eink readers with note-taking focus, backdrop overhaul, and swipe page navigation.

2026 Feb

Intag2 MS Store pipeline and PDF support — intag2
Restructured CI pipelines for manual triggering, added PDF file extension support, and fixed MS Store publishing with PowerShell REST API.

Jaxon code intelligence engine — jaxon
Added LSP integration, index freshness detection, and expanded framework coverage for DI registration and dead code detection.

N8n TelePilot2 fork fixes — n8n-nodes-telepilot-2
Fixed auth race conditions, upgraded n8n CI version, and added album trigger.

Dotfiles and Neovim config — .dotfiles
Set up Neovim IDE config with LSP, treesitter, and telescope, plus pre-commit hooks for secret detection.

2026 Jan

Poker CV pipeline improvements — poker-cv
Achieved 99% hand detection and 97.8% board card accuracy, added generator-based recovery, and implemented CvRecovery module for state validation.

Intag v2 README and metadata support — intag
Updated README for v2 release with Microsoft Store link and added support for additional metadata properties.

Tasker touch visualization — tasker
Improved UX with direct launch, completed status, and touch event visualization on sensor charts.

N8n ClaudeCode SDK migration — n8n-nodes-claudecode
Migrated to Claude Agent SDK v0.2.12 and added Haiku model support.

2025 Dec

J-uni-hid v10-v11 firmware iterations — j-uni-hid
Developed v10 (USB touch via mouse fallback), v11 (BLE touch+mouse, USB Touch on Android), with jitter fixes, reconnect improvements, and throttled performance modes.

Auto-claude squash merge and git rules — auto-claude
Added squash merge support, completion tracking, and Git Rules system for project settings.

MEMU3 USB HID rate limiting — MEMU3
Integrated UsbHidController with AimAssistant and added rate limiting for mouse event emission.

2025

Summit platform foundation — summit
Continued building the SaaS crypto algo trading platform with AI twists, focusing on core trading infrastructure and wallet management.

Freqtrade multi-bot Telegram tooling — freqtrade-tg-multibot
Built a Telegram bot for managing multiple Freqtrade instances with daily profit calculations and authentication handling.

Freqtrade monitor Flutter app — freqtrade_monitor
Developed a Flutter mobile app for monitoring Freqtrade bots with charts, card UI, and import-export functionality.

Telegram assistant bots — pAssistant
Maintained a Telegram automation tool with summarization, multi-target sending, and image deduplication features.

Strategy development for Freqtrade — freqtrade_startegies
Developed and refined multiple trading strategies with pattern confirmation, parameter optimization, and backtesting.

2024

Telegram assistant bot foundation — pAssistant
Built the initial Telegram automation bot with forwarding, logging, and environment configuration.

Experience

Tech Lead Sep 2024 – Present · 2 yrs 2 mos
Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer
Oct 2023 – Aug 2024 · 10 mos
Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer
Jun 2021 – Sep 2023 · 2 yrs 3 mos
Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer
Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia
Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer
Sep 2018 – Feb 2019 · 5 mos
United States (remote)
ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer
Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia
Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#
SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++
Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C
Windows input filter and injection driver similar to Interception.

crypto-model-research · Python
R&D project for crypto price prediction models.

agent-harness · Rust
Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python
Computer vision experiments for online poker platforms.

intag2 · C++
Assign tags to files and folders in Windows Explorer.

sunflower · Go
A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin
Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin
LLM-powered Android assistant with phone control capabilities.
