

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-08-10

Over the past year, I focused heavily on building and refining Summit, a SaaS crypto algorithmic trading platform with AI and neural network components, implementing UI features like hold-to-confirm and admin page headers. I also advanced j-uni-hid, a feature-rich USB HID firmware for ESP32-S3, adding event-driven capabilities and matrix support. In parallel, I worked on several secondary projects including a crypto model research tool, a poker computer vision system, a Windows file tagger (intag2), and various automation and utility tools like jolt (AutoHotKey alternative) and blackboard-launcher (E Ink note-taking launcher).

Activity timeline (last 12 months)

2026 Aug

Refactored admin UI pages to use shared PageHeader component — summit

Unified title rendering across 10+ admin detail pages by adopting a reusable PageHeader component.

Replaced native confirm dialogs with custom HoldToConfirm component — summit

Implemented a press-and-hold pattern for destructive confirmations to improve UX consistency.

Refactored currency formatting to use shared formatPoints utility — summit

Delegated money string formatting to a centralized fmtUSD/formatPnl helper.

2026 Jul

Worked on the personal C++ project named input-driver — input-driver

Inferred from project name and language: developed a low-level input driver in C.

Worked on the personal Kotlin project named j-tts-android — j-tts-android

Inferred from project name and language: developed a text-to-speech Android application in Kotlin.

Worked on the personal Kotlin project named ozwil-android — ozwil-android

Inferred from project name and language: developed an Android application in Kotlin.

2026 Jun

Added opt-in debug logging and fixed WinAPI hotkey threading — jolt

Implemented jolt.ini debug flag for logging and ensured hotkey conditions evaluate off the UI thread.

Built scenario engine with typed actions and interception support — jolt

Created a rule-based automation engine supporting conditions, themes, sound actions, and input gating.

Improved LLM prompt handling and repo filtering in personal profile — jamminroot

Refined LLM output voice enforcement, added private repo handling, and enhanced diagnostics logging.

2026 May

Added fire-and-forget event emission and 8x8 matrix variant — j-uni-hid

Extended USB HID firmware with non-blocking event emission and a new matrix hardware variant.

Implemented Knowledge Base app and FB2 reader for e-ink firmware — biscuit

Added a knowledge base with taxonomy browser, FB2 ebook support, and screensaver folder to the xteink firmware.

2026 Apr

Added YOLO confidence threshold UI and USB-HID runtime fallback — poker-cv

Implemented sensitivity control via confidence slider and automatic fallback from Interception to USB-HID.

Built map renderer and knowledge base app for Papyrix firmware — papyrix

Optimized map rendering for Apple Silicon, added grayscale tile server, and created a knowledge base with taxonomy navigation.

Developed blackboard launcher with swipe navigation and status bar control — blackboard-launcher

Created an E Ink-focused Android launcher with note-taking emphasis, gesture zones, and Onyx SDK integration.

Updated FIClash with XHTTP transport support via rebased Mihomo — FIClash

Bumped Clash.Meta to re-expose proxy APIs and added XHTTP transport support.

2026 Mar

Restricted aim assist to focused monitor window and fixed autofire pause — poker-cv

Ensured aim assist only activates on the scan monitor's focused window and autofire respects app pause state.

Persisted mode and autofire state across restarts — poker-cv

Added state persistence for application mode and autofire toggle.

Added fuzzy stop sequence matching and streaming leak fix — intag2

Implemented edit-distance-based stop sequence matching and fixed streaming token leak by buffering partial sequences.

Integrated MarkdownText component and tool confirmation dialogs — intag2

Enhanced chat UI with Markdown rendering and added confirmation dialogs for tool actions.

2026 Feb

Added multi-select mark mode and batch delete for YOLO labeler — yolo-labeler

Implemented mark mode for selecting multiple labels and batch deletion/clearing.

Fixed cache KeyError and added Ctrl+Delete deletion with flexible YAML — yolo-labeler

Resolved cache issue on save, added keyboard shortcut for entry deletion, and improved YAML resolution.

Added retry logic and fixed npm 403 errors in n8n node CI — n8n-nodes-telepilot-2

Improved CI reliability with retry for n8n install and removed stale npm config causing registry errors.

Initialized dotfiles with SSH keys and chezmoi configuration — dotfiles

Set up chezmoi-managed dotfiles including bashrc, bash_profile, and age-encrypted SSH keys.

2026 Jan

Fixed abort controller cleanup and updated Claude Agent SDK — n8n-nodes-claudecode

Resolved abort controller lifecycle issue after query completion and migrated to Claude Agent SDK v0.2.12.

Improved tasker UX with direct launch and touch event visualization — tasker

Enhanced sensor chart interaction with touch event visualization and direct app launch capability.

Added fire-and-forget event emission for USB HID firmware — j-uni-hid

Implemented non-blocking event emission to improve responsiveness in USB HID communication.

2025 Dec

Migrated n8n node to Claude Agent SDK and added Haiku model support — n8n-nodes-claudecode

Updated the n8n node to use the official Claude Agent SDK and added support for the Haiku model.

2025

Updated PowerShell profile with new aliases and functions — powershell_profile

Maintained personal PowerShell profile with incremental improvements.

Developed Telegram bot for content collection with ad filtering — jContentCollector

Built a C# Telegram bot that collects content from channels, filters ads, and sends via webhook.

Created Telegram trading bot with Docker support and CORS configuration — freqtrade-tg-multibot

Developed a C# Telegram bot for Freqtrade with web application, Docker deployment, and enhanced authentication.

Built Telegram assistant with API credentials and Serilog logging — pAssistant2

Created a C# Telegram assistant with secure API credential handling and structured logging.

Initialized Freqtrade user data with custom loss functions — freqtrade_user_data

Set up Freqtrade trading bot configuration with custom loss functions for strategy optimization.

Updated ChatGPT Telegram bot with new features — chatgpt_telegram_net

Maintained a .NET-based ChatGPT Telegram bot with incremental updates.

2024

Initialized personal profile repository with basic structure — jamminroot

Created the initial commit for the personal GitHub profile repository.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 11 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two

product lines.

- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.
