

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-08-31

I built the core of a SaaS crypto algo trading platform (summit), adding follow management, strategy catalog, and email authentication. Simultaneously, I developed firmware for USB HID devices (j-uni-hid) and a Windows input filter driver (input-driver). On the research side, I continuously refined a crypto price prediction model (crypto-model-research), running audits and discarding hypotheses. I also worked on multiple secondary projects: an Android TTS engine (j-tts-android), an on-device LLM with phone automation (ozwil-android), a file-tagging utility for Windows Explorer (intag2), and an agentic worker framework (agent-harness). Additionally, I built a poker computer vision pipeline (poker-cv), a trading strategy repository (freqtrade_startegies), and maintained Telegram bot infrastructure (freqtrade-tg-multibot). The year also saw the start of a minimal AutoHotKey alternative (jolt) and a graph-powered code intelligence engine (jaxon). Across these projects, I worked on full-stack features, firmware, driver development, machine learning research, and infrastructure.

Activity timeline (last 12 months)

2026 Aug

SaaS crypto algo trading platform — summit

Built follow management features including interactive exit simulator, open position tracking, and costs. Reworked strategy catalog with exchange suitability filters and per-follow history. Added email authentication and admin backfill.

Crypto price prediction model research — crypto-model-research

Conducted a full audit of the model pipeline, discarding several hypotheses (HMM state features, isotonic sizing) and keeping Mondrian conformal gates. Prepared refit runbooks and drift monitoring tooling.

Windows Explorer file-tagging utility — intag2

Fixed settings persistence, Explorer refresh, and backdrop fallback. Added Vorbis comment writing for audio files.

Agentic worker framework — agent-harness

Built workspace-aware Telegram threading, memory management with hybrid retrieval, and a graphical control room. Added tenant interaction channels and resource registration.

2026 Jul

File-tagging utility maintenance — intag2

Collapsed the two-stage release into a single workflow, fixed metadata write failures, and added Vorbis comment

support for ogg files.

Crypto trading strategy development — freqtrade_startegies

Added pack-relative reversion and BTC-relative reversion strategies, with forward testing and documentation.

2026 Jun

Personal CV automation — jamminroot

Enhanced the CV generation pipeline with LLM-based timeline, improved heatmap and project cards, and added dry-run mode.

Trading strategy iteration — freqtrade_startegies

Developed multiple EwoDip and reversion strategies, documented forward test results, and tuned parameters.

Minimal AutoHotKey alternative — jolt

Built the scenario engine with typed actions, input gates, and Interception support. Added conditions, rules, and sound actions.

2026 May

USB HID firmware for ESP32-S3 — j-uni-hid

Added fire-and-forget emitting and an 8x8 matrix variant. Introduced platformio support.

Windows input filter driver — input-driver

Built a KMDF driver for keyboard and mouse capture and injection. Added event filtering, hardware ID matching, and integration tests.

Android TTS engine with multiple models — j-tts-android

Integrated VITS, Piper, and F5-TTS engines. Added pitch control, text normalisation with RuNorm, and background TTS with core pinning.

File-tagging utility updates — intag2

Fixed desktop.ini encoding for non-ASCII characters and added PDF support to the context menu.

Computer vision assist tool — MEMU3

Switched YOLO inference to DirectML, added bow/flick feature with tracking, and improved the debug overlay.

2026 Apr

USB HID firmware iteration — j-uni-hid

Drafted a new firmware variant and fixed USB disconnection issues.

File-tagging utility fixes — intag2

Fixed changelog generation and preserved existing desktop.ini entries when writing folder metadata.

E-reader firmware with maps and knowledge base — papyrix

Added Knowledge Base and Map applications, optimised the map renderer, and improved FB2 encoding support.

Computer vision assist updates — MEMU3

Added HP aim scaling, YOLO confidence threshold UI, and runtime fallback to USB-HID.

2026 Mar

USB HID firmware advancement — j-uni-hid

Introduced dual-core and USB variants of the firmware.

On-device LLM with phone automation — ozwil-android

Rewrote the sub-agent architecture with session-based delegation and tool calling. Added background service, wake processing, and model presets.

E-reader firmware enhancements — papyrix

Rewritten the Map app UI for landscape, added PDF/DjVu conversion, and fixed encoding issues.

Computer vision assist improvements — MEMU3

Rewrote the overlay to D3D11, added linger and autofire modes, and persisted state across restarts.

2026

Pet research on poker computer vision — poker-cv

Developed a pipeline for card detection, hand reconstruction, and log validation from video. Achieved high accuracy for hero cards and board cards.

Graph-powered code intelligence engine — jaxon

Added language support for C++, Go, Rust, and Svelte. Implemented dead code detection, LSP integration, and incremental sync.

Neovim dotfiles — .dotfiles

Migrated to Neovim 0.11 API, added secret detection pre-commit hook, and fixed treesitter and LSP configurations.

2025

Telegram bot for multi-bot management — freqtrade-tg-multibot

Built a web application with Docker support, improved Telegram authentication, and refined profit calculations.

Autonomous AI coding tool — auto-claude

Added squash-merge, completion tracking, and Git rules system. Improved the UI with task ID and worktree management.

Crypto trading strategy development — freqtrade_strategies

Developed and optimized multiple strategies (e.g., SimpleEMA, MinimalPMAX) with backtesting and parameter tuning.

Computer vision assist tool — MEMU3

Started the project with USB HID mouse event rate limiting and YOLO model integration.

2024

Telegram assistant bot — pAssistant

Built a Telegram bot with multi-target sending, summarization, and error handling. Refactored settings and logging.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 11 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

Last 12 months on GitHub: 5,111 contributions · 4,817 public commits · 82 PRs · 180 reviews. Generated 2026-08-31.
