

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-08-03

I've been building a full-stack crypto algo trading platform (Summit) with AI-driven copy trading, a live copylab dashboard, and an LLM recommendation engine. On the firmware side, I developed a feature-rich mouse and keyboard emulation firmware for ESP32-S3 (j-uni-hid) and a Windows kernel-mode input filter driver (input-driver). I also conducted extensive research on crypto price prediction models (crypto-model-research), iterating on MoE architectures and productionizing ONNX ensembles. Across the board, I worked on a file-tagging utility for Windows Explorer (intag2), an Android TTS engine with multiple models (j-tts-android), and an on-device LLM agent with phone-use capabilities (ozwil-android). I refined my CV generation pipeline (jamminroot) and maintained various automation tools, trading bots, and personal projects.

Activity timeline (last 12 months)

2026 Aug

Summit copy trading platform expansion — summit

Built the copylab module with live exposure maps, AI grouping, leverage profiles, and an LLM recommendation system for wallet selection.

2026 Jul

Crypto model productionization — crypto-model-research

Productionized the champion 13-feature model, validated forward-testing with 77-90% win rate, and exported the ensemble to ONNX for Summit integration.

Intag2 v2.5 release and metadata fixes — intag2

Shipped version 2.5 with Vorbis comment support for audio files, fixed uninstall and metadata write errors, and improved CI workflows.

New trading strategies for freqtrade — freqtrade_strategies

Developed pack-relative and BTC-relative reversion strategies, adding diversification to the 15m strategy portfolio.

2026 Jun

CV generation pipeline overhaul — jamminroot

Reworked the CV generation pipeline with importance tags, heatmap visualization, and a skills section; added dry-run mode and LLM voice enforcement.

Jolt scenario engine and input gate — jolt

Built the scenario engine with typed actions, input gate, and interception support; added conditions, rules, and sound actions.

EWO dip-buy strategy development — freqtrade_startegies

Created a series of EwoDip15m strategies with trend regimes, DCA averaging, and forward-testing documentation.

2026 May

j-uni-hid v13 firmware development — j-uni-hid

Developed v13 with fire-and-forget emitting, USB HID events, and an 8x8 matrix variant for the ESP32-S3.

Input driver v1.2 and integration tests — input-driver

Released v1.2 with library predicates, event type masks, and a full integration-test runner covering all driver capabilities.

J-TTS Android engine refactoring — j-tts-android

Removed deprecated TTS engines, integrated F5-TTS and sherpa-onnx, added pitch control, and implemented Russian text normalisation (RuNorm).

MEMU3 YOLO and bow/flick features — MEMU3

Reworked YOLO inference to DirectML, added closed-loop tracking flick with bezier motion, and improved the debug overlay.

Jamminroot CV PDF and project cards — jamminroot

Added a CV PDF with project cards, pulse line charts, and heatmap; restructured the README and workflow rebase retries.

Biscuit firmware update — biscuit

Added Knowledge Base app, FB2 reader, screensaver folder, and Mesh Chat fixes to the xteink 4 firmware.

2026 Apr

j-uni-hid v13s8x8 draft — j-uni-hid

Drafted a new firmware variant (v13s8x8) and fixed a dying issue in the v13 build.

Intag2 changelog and desktop.ini fix — intag2

Fixed changelog generation and preserved existing desktop.ini entries when writing folder metadata.

MEMU3 aim assist and debug overlay — MEMU3

Added HP aim scaling with YOLO bbox, momentum dampening, and a separate debug window; implemented runtime fallback to USB-HID.

Papyrix map app and knowledge base — papyrix

Built a map app with tile viewer and region selection, a Knowledge Base with taxonomy browser, and added FB2 encoding support.

FIClash XHTTP transport — FIClash

Added XHTTP transport support via a rebased Mihomo fork and re-exposed proxied APIs.

Crypto model attention investigation — crypto-model-research

Investigated attention mechanisms; three experiments all below baseline due to MPS limitations.

2026 Mar

j-uni-hid v12 and v13 introduction — j-uni-hid

Introduced v12 (dual-core) and v13 (USB) firmware variants.

MEMU3 overlay rewrite and autofire — MEMU3

Rewrote the overlay to D3D11+D2D+DComp, added linger mode, autofire, HID click emulation, and YOLO model integration.

Ozwil Android sub-agent architecture — ozwil-android

Rewrote the sub-agent system with session-based delegation, tool routing, and auto-delegation when the main model refuses; added model presets and wake processing.

Ozwil API backend setup — ozwil-api

Set up the ASP.NET Core backend with Docker healthcheck, tool safety rails, and initial Ozwil app configuration.

Papyrix map app and PDF conversion — papyrix

Rewrote the MapApp UI for landscape, added PDF/DjVu to XTCH conversion, and fixed FB2 encoding support.

Blackboard launcher UI overhaul — blackboard-launcher

Overhauled the backdrop with swipe navigation, added status bar control, and fixed drawing reliability for Onyx e-ink.

Crypto model MoE experiments — [crypto-model-research](#)

Ran extensive experiments with Split MoE gates, Top-1 Sparse MoE, and snapshot ensembles; benchmarked 6 variants and updated the production bundle.

2026

Poker CV pipeline development — [poker-cv](#)

Built a computer vision pipeline for online poker platforms, achieving 99% hand detection and 97.8% board card accuracy.

Intag2 CI and MS Store publishing — [intag2](#)

Set up CI pipelines for MS Store publishing, fixed CLI and metadata issues, and added auto-updating changelog.

Jaxon code intelligence engine — [jaxon](#)

Built a graph-based code intelligence engine with LSP integration, dead code detection, and multi-language parser support.

TelePilot n8n nodes maintenance — [n8n-nodes-telepilot-2](#)

Fixed auth race conditions, CI retry logic, and upgraded n8n test version for the Telegram n8n integration.

YOLO labeler tool — [yolo-labeler](#)

Created a simple on-host YOLO labeler with multi-select mark mode and entry deletion.

Dotfiles and Neovim config — [.dotfiles](#)

Set up chezmoi-managed dotfiles with Neovim 0.11+ config, treesitter, LSP, and secret detection pre-commit hook.

MEMU3 and pAssistant updates — [MEMU3](#)

Polished MEMU3 with mode persistence and status window fixes; maintained pAssistant with summarization and error logging.

2025

Freqtrade Telegram multi-bot — [freqtrade-tg-multibot](#)

Built a Telegram bot for monitoring multiple freqtrade instances, with daily profit calculations and bot authentication.

pAssistant content aggregation and summarization — [pAssistant](#)

Maintained a Telegram content aggregator with summarization, repost indices, and multi-target sending.

Trading strategy development — [freqtrade_startegies](#)

Developed and backtested multiple trading strategies (PMAX, EMA, pattern-based) for freqtrade, optimizing parameters and win rates.

Auto-claude autonomous coding agent — [auto-claude](#)

Built an autonomous AI coding agent with worktree management, squash merging, git rules, and task ID tracking.

j-uni-hid v10 and v11 firmware — [j-uni-hid](#)

Developed multiple firmware versions (v10 USB touch, v11 BLE) with touch, mouse, and swipe support for ESP32.

MEMU3 early HID and YOLO work — [MEMU3](#)

Initial work on USB HID mouse movement, rate limiting, and aim assistant integration.

Freqtrade monitor Flutter app — [freqtrade_monitor](#)

Built a Flutter mobile app for monitoring freqtrade bots with winrate charts, glassy cards, and import-export.

2024

pAssistant and intag maintenance — [pAssistant](#)

Maintained the Telegram bot with error handling, forwarding, and logging improvements.

Intag README updates — [intag](#)

Updated the README for the Windows Explorer file-tagging utility.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 11 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions,

operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.
