

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-07-20

Built the core of Summit, a SaaS crypto algo-trading platform with AI/ML twists — strategy groups & variants, a quorum-based voting system with LLM experts, evaluation benchmarking, and admin tooling. Also developed j-uni-hid, a feature-rich mouse/keyboard emulation firmware for ESP32-S3, and input-driver, a Windows WDK input filter/injection driver. Researched crypto price prediction models in Python, building and forward-testing a champion ensemble with 77-90% win rate. Maintained a portfolio of personal projects: poker CV pipeline for online platforms, Windows Explorer file-tagging utility intag2, Android TTS engine j-tts-android with multiple model backends, and the ozwil Android app for on-device LLM with phone-use capabilities. Iterated on the CV generation toolchain jamminroot, refining timeline extraction, heatmap visualization, and PDF rendering. Work spanned C#, C++, C, Python, Kotlin, TypeScript, and Dart across systems programming, machine learning, mobile development, and infrastructure automation.

Activity timeline (last 12 months)

2026 Jul

Strategy groups and quorum voting — summit

Built strategy groups with Guided/Standard variants, a quorum-based voting system with LLM expert integration and categorical voting, evaluation benchmarking frontend and backend, and admin UI improvements.

Crypto price prediction model research — crypto-model-research

Productionized a 13-feature champion model ensemble with 77-90% forward-tested win rate, integrated ONNX export for Summit, and ran experiments with enriched features and PnL surrogate objectives.

Trading strategy development — freqtrade_startegies

Developed and forward-tested multiple 15m trading strategies including pack-relative reversion and BTC-relative-strength reversion variants with strong OOS performance.

2026 Jun

CV generation toolchain — jamminroot

Refined the CV generation pipeline: added LLM model override, enforced first-person voice, excluded archived repos, split Deeplay roles, and improved heatmap and timeline rendering.

Minimal AutoHotKey alternative — jolt

Built a scenario engine with typed actions, input gate, interception support, conditions, rules, stateless themes, and

sound actions for a minimal AutoHotKey alternative.

Trading strategy development — freqtrade_startegies

Developed EwoDip15m strategy variants with DCA averaging, trend regime guards, and broad 50-pair universe champion with strong forward-test results.

2026 May

USB HID firmware development — j-uni-hid

Developed v13 firmware variant with 8x8 matrix support, fire-and-forget USB HID emitting, and PlatformIO integration for the ESP32-S3 mouse/keyboard emulation project.

Windows input driver library — input-driver

Added push-style event delivery with JidStartListener/JidStopListener, integration-test runner covering all documented capabilities, and per-event Block support with library predicates.

Android TTS engine development — j-tts-android

Integrated multiple TTS engines including sherpa-onnx, TeraTTS, and F5-TTS; added pitch control, question/exclamation intonation sliders, RuNorm text normalization, and background processing optimizations.

Aim assist and overlay work — MEMU3

Refactored YOLO inference to DirectML EP, added bow/flick tracking with bezier motion and user-input compensation, and improved debug overlay and configuration persistence.

E-ink reader firmware update — biscuit

Added Knowledge Base app, FB2 reader, screensaver folder, and Mesh Chat fixes to the expanded biscuit firmware for xteink 4.

2026 Apr

USB HID firmware iteration — j-uni-hid

Drafted new v13s8x8 firmware variant and fixed USB disconnect issues in the v13 ESP32-S3 HID firmware.

E-ink reader firmware development — papyrix

Added Map app with region selection and tile viewer, Knowledge Base app with taxonomy browser, FB2 encoding fixes, and optimized map renderer for Apple Silicon.

Proxy client update — FICLash

Added XHTTP transport support via rebased mihomo and re-exposed ProxiesWithProviders/GetProxyNameList APIs.

Aim assist improvements — MEMU3

Added HP aim scaling with YOLO body bbox, debug overlay in separate window, and runtime fallback from Interception to USB-HID.

2026 Mar

On-device LLM Android app — ozwil-android

Rewrote sub-agent architecture with session-based delegation and tool execution pipeline, added setup wizard, KV cache reuse, background service architecture, and multiple model support including Qwen and LFM.

Crypto price prediction model research — crypto-model-research

Ran extensive experiments with MoE architectures, FFT frequency decomposition for gate routing, and multi-horizon regression; achieved champion ensemble with 0.8617 val_sq.

Aim assist and overlay rewrite — MEMU3

Rewrote overlay to D3D11+D2D+DComp, added status window, autofire, HID click emulation, YOLO model integration, and restricted aim assist to focused window.

E-ink launcher development — blackboard-launcher

Built a simple Android launcher for E-ink readers centered around note-taking, with backdrop overhaul, swipe page navigation, and status bar control.

2026 Feb

Windows file-tagging utility — intag2

Added .pdf support to context menu, restructured CI pipelines for manual triggering and auto-drafting releases, fixed MS Store publishing workflow with PowerShell REST API, and added CLI for reading properties.

Neovim dotfiles configuration — .dotfiles

Set up initial Neovim config with full IDE setup, migrated LSP config to vim.lsp.config for Neovim 0.11+, added pre-

commit hook for secret detection, and fixed treesitter and telescope compatibility.

Code intelligence engine — jaxon

Added LSP integration for language-server-powered code analysis, index freshness detection with automatic incremental sync, and expanded framework coverage for DI registration and dead code detection.

YOLO labeler tool — yolo-labeler

Built a simple on-host YOLO labeler with multi-select mark mode, Ctrl+Delete entry deletion, and flexible yaml resolution.

Telegram automation node — n8n-nodes-telepilot-2

Fixed auth race condition, upgraded n8n CI test version, added retry logic for npm install, and added new album trigger.

2026 Jan

Poker CV pipeline development — poker-cv

Implemented generator-based recovery, interpreter integration to video player, CvRecovery module for poker state validation, and achieved 99% hand detection and 97.8% board card accuracy.

Touch event visualization tool — tasker

Improved UX with direct launch, completed status, and touch event visualization on sensor charts.

USB HID firmware iteration — j-uni-hid

Fixed graceful COM restart in the ESP32-S3 HID firmware.

2025

USB HID firmware development — j-uni-hid

Developed v10-v13 firmware variants for ESP32-S3 with USB touch, BLE support, self-reporting, performance profiles, and Android compatibility fixes.

Autonomous AI coding tool — auto-claude

Added squash-merge functionality, completion tracking, Git rules system, and task ID management to the autonomous multi-session AI coding tool.

Telegram bot monitoring — freqtrade-tg-multibot

Built a Telegram bot for monitoring multiple Freqtrade instances with daily profit calculations, authentication, and Docker deployment.

Freqtrade monitoring app — freqtrade_monitor

Developed a Flutter app for monitoring Freqtrade instances with glassy cards, winrate bar charts, expandable cards, and import-export functionality.

Telegram automation assistant — pAssistant

Added summarization, multi-target sending, image deduplication, and redirection rework to the Telegram automation assistant.

Trading strategy development — freqtrade_startegies

Developed and refined multiple trading strategies including Fenix5m, botman, and ns531_pat_fixed35 with optimized parameters and backtesting.

Content collector tool — jContentCollector

Built a Telegram content collector with ad filtering, webhook support, and ignored channels.

n8n Claude Code node — n8n-nodes-claudecode

Migrated to Claude Agent SDK, added Haiku model support, and fixed abort controller cleanup.

2024

Telegram automation assistant — pAssistant

Maintained the Telegram automation assistant with logging improvements, forwarding bug fixes, and minor refactoring.

Asio server test — apollo_server

Initial work on an Asio-based C++ server.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 10 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions,

operational runbooks.

Software Development Engineer

Akvelon (vendor for Microsoft) · Full-time

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

ICVR · Full-time

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Konstanta, LLC · Full-time

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.
