

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-09-07

Built and reworked the core of the Summit crypto algo-trading platform, adding algorithmic copy-trading features, a calm-liquidity rebalancing system, and backtesting infrastructure. Investigated and fixed execution fallbacks, wallet-group vetoes, and Hyperliquid pair resolution.

Developed two new firmware variants for the j-uni-hid ESP32-S3 project (v12 dual-core, v13 USB HID), and shipped a Windows input filter/injection driver (KMDF) with event-level block, integration tests, and a library for high-level control. Also maintained the j-tts-android app, adding new TTS engines (F5-TTS, GPT-SoVITS scaffold) and pitch/speed controls.

Researched crypto price prediction models in the crypto-model-research project, conducting a systematic audit of 11 models, discarding a dozen speculative features, and building a unified benchmark. Refined the Sunflower browser-in-browser project with human-input planning, font-pack handling, and deploy infrastructure.

Iterated on the intag2 Windows Explorer tagging tool, fixing settings persistence, adding Ogg Vorbis comment support, and overhauling CI/CD pipelines. Also worked on the OzWil Android LLM app, rewriting sub-agent architecture and adding KV cache reuse, and the agent-harness Rust project, introducing tenant workspaces, Telegram Secretary, and a graphical control panel.

Activity timeline (last 12 months)

2026 Sep

Summit backtest and configurator — summit

Built a backtest configurator and signal rebalance system with calm-liquidity baskets and paper-only signals for the SaaS crypto algo-trading platform.

Sunflower browser-in-browser fixes — sunflower

Fixed font-pack building, proxy password handling, and unlaunchable profiles in the browser-in-a-browser project.

2026 Aug

Summit copy-trading features — summit

Reworked the copy-trading system: added honest cost estimates, trailing exit sliders, interactive exit simulators, and

position peak backfill.

Summit rebalance wallet groups — summit

Implemented wallet-group veto persistence and calm-liquidity backtest replay on hourly bars for the algo-trading platform.

Crypto model research audit — crypto-model-research

Conducted a systematic model audit: unified stack protocol sweep, discarded a dozen speculative features, and built a frozen benchmark for the price prediction project.

Intag2 fixes and Vorbis support — intag2

Fixed settings persistence, Explorer refresh issues, and added Vorbis comment writing for audio files in the Windows file-tagging tool.

Sunflower human input planning — sunflower

Built gesture-based movement planning, permission prompt handling, and font-pack deployment in the browser-in-a-browser project.

Agent-harness workspace isolation — agent-harness

Added tenant workspaces, data streams, a graphical Mini App control room, and Telegram Secretary with role-aware controls to the agentic worker project.

2026 Jul

Summit rebalance and follows work — summit

Refined the rebalance system with per-signal fanout and calm-liquidity silence handling, and improved the follows pages with exchange account management.

Freqtrade strategy additions — freqtrade_startegies

Added several new trading strategies: pack-relative reversion variants and a broad 50-pair universe champion, with forward-tested documentation.

2026 Jun

CV automation improvements — jamminroot

Reworked the CV generation pipeline: added LLM voice enforcement, skills section, and team/throughput metrics to the PDF output.

Jolt hotkey conditions — jolt

Extended the minimal AutoHotKey alternative with condition evaluation, stateless themes, sound actions, and a debug log.

2026 May

J-uni-hid v13 firmware — j-uni-hid

Developed v13 firmware variant for ESP32-S3 with fire-and-forget event emitting and an 8x8 matrix configuration.

Input driver library and tests — input-driver

Built a library with start/stop event delivery, an integration-test runner covering all documented capabilities, and relaxed SDDL for the KMDF input driver.

J-TTS Android engine integration — j-tts-android

Integrated multiple TTS engines including F5-TTS, GPT-SoVITS, and sherpa-onnx with per-voice downloading, plus pitch control for VITS engines.

MEMU3 YOLO inference changes — MEMU3

Switched GPU inference from CUDA to DirectML, added closed-loop tracking flick and user-input compensation in the computer vision project.

Biscuit firmware expansion — biscuit

Added a knowledge base app, FB2 reader, screensaver folder, and Mesh Chat fixes to the e-ink device firmware.

CV PDF generation — jamminroot

Generated CV PDF with pulse charts and project cards, and refined the LLM coverage pipeline for mandatory repos.

2026 Apr

J-uni-hid v13 variant and fixes — j-uni-hid

Drafted a new 8x8 matrix firmware variant and fixed disconnect issues in the v13 USB HID firmware.

Intag2 PDF support and CI — intag2

Added .pdf to supported file extensions for context menu and fixed changelog generation in the release workflow.

MEMU3 overlay and autofire — MEMU3

Rewrote the overlay to D3D11+D2D, added HP aim scaling and trigger gate on per-target YOLO confidence, and USB-HID fallback.

FIClash XHTTP support — FIClash

Added XHTTP transport support and bumped Clash.Meta to re-expose proxy APIs.

Papyrix map and home screen — papyrix

Added map app with tile viewer, knowledge base with taxonomy browser, and icon-based home screen to the e-ink firmware fork.

2026 Mar

J-uni-hid v12 firmware — j-uni-hid

Developed v12 dual-core firmware variant for the ESP32-S3 HID device.

OzWil Android sub-agent architecture — ozwil-android

Rewrote the sub-agent architecture with session-based delegation, added KV cache reuse, and built a questionnaire-based model recommendation wizard.

Blackboard launcher overhaul — blackboard-launcher

Overhauled the E-ink note-taking launcher: redesigned backdrop, added swipe page navigation, and fixed drawing lifecycle issues.

J-tts-android initial engine work — j-tts-android

Began initial TTS engine integration with contextual homograph disambiguation, endpoint calibration, and session caching.

2026 Feb

Intag2 CI pipeline restructuring — intag2

Restructured CI/CD pipelines for manual triggering and automatic tagging, fixed Store submission issues with PowerShell REST API rewrite.

Jaxon code intelligence engine — jaxon

Added LSP integration, dead code detection for interface implementations, and incremental sync with freshness detection to the code intelligence engine.

Neovim dotfile configuration — .dotfiles

Set up a full Neovim IDE configuration with LSP, treesitter, pre-commit hooks, and OSC 52 clipboard for remote sessions.

YOLO labeler creation — yolo-labeler

Built a fast on-host YOLO labeler with multi-select mark mode, flexible YAML resolution, and Ctrl+Delete entry deletion.

2026

Summit core and copy-trading — summit

Continued major work on the Summit algo-trading platform: built copy-trading features, rebalance systems, and algorithmic strategy catalog throughout the year.

J-uni-hid firmware development — j-uni-hid

Developed multiple firmware versions (v9-v13) for ESP32-S3 with BLE, USB touch, and performance mode features.

Crypto model research — crypto-model-research

Conducted extensive model research with a catalog of 11 models, unified protocol, and live-drift monitoring throughout the year.

OzWil Android app — ozwil-android

Built and refined the on-device LLM app with phone-use capabilities, sub-agent delegation, and multiple model support.

Intag2 and Intag tagging tools — intag2

Maintained the Windows Explorer file-tagging tools with metadata support, CI improvements, and Microsoft Store submission fixes.

Agent-harness Rust project — agent-harness

Developed the JAW agentic worker with Telegram integration, memory retrieval, and a graphical control panel.

N8n nodes and automations — n8n-nodes-telepilot-2

Fixed auth race conditions, upgraded CI, and added album trigger for Telegram node in n8n.

2025

Poker CV pet project — poker-cv

Built computer vision pipeline for online poker: hand detection, log reconstruction, and CV recovery module.

Freqtrade bot ecosystem — freqtrade-tg-multibot

Developed multi-bot Telegram management with Docker support, daily profit calculations, and authentication handling.

Auto-Claude multi-session AI — auto-claude

Implemented Git rules system, squash-merge completion tracking, and task ID management for the autonomous AI coding tool.

Android TTS and assistant tools — pAssistant

Maintained the personal Telegram assistant and pAssistant2 with summarization, image dedup, and multi-target sending.

Trading strategy development — freqtrade_startegies

Developed and optimized numerous trading strategies with backtesting and parameter tuning throughout the year.

J-tts-android initial release — j-tts-android

Initial TTS evaluation engine release with Vosk, Silero, and Piper engines for Russian speech synthesis.

N8n nodes and telepilot — n8n-nodes-telepilot-2

Initial deployment setup and Alpine Linux support for Telegram integration nodes.

Experience

Tech Lead

Sep 2024 – Present · 2 yrs

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

sunflower · Go

A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

agent-harness · Rust

Rust tool that controls macOS via UI tree and screen capture.

Last 12 months on GitHub: 5,205 contributions · 4,913 public commits · 78 PRs · 181 reviews. Generated 2026-09-07.
