

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-08-17

I've been deeply focused on two major projects. First, building Summit—a full SaaS crypto algo-trading platform with AI and neural-network components—where I've been working across the entire stack: the trading engine, risk management, onboarding, admin panels, charting, and a Telegram-based auth flow. The recent weeks saw a large refactor of the guard/protection system, consolidating risk settings into a universal catalogue, adding account-wide loss budgets, and giving strategies their own timing overrides. Second, I've been developing J-UNI-HID, a feature-rich mouse and keyboard emulation firmware for the ESP32-S3, pushing through multiple firmware variants (v10–v13) with USB/BLE hybrid support, touch on Android, and mouse on macOS. On the side, I've contributed to the input-driver project—a Windows KMDF input filter driver for capture and injection—and to crypto-model-research, where I've been iterating on a price-prediction model, moving from experiment tracking to forward-testing and ONNX deployment. Other notable work includes revamping the Intag2 file-tagging utility for Windows Explorer with Vorbis comments and CI/CD pipeline fixes, building out the OzWil Android app (an LLM with phone-use capabilities) with sub-agent tool execution and model routing, and tangentially maintaining projects like J-TTS Android (multi-engine TTS), poker-cv (computer vision for poker hand detection), and the jamminroot meta-repo (CV generation pipeline).

Activity timeline (last 12 months)

2026 Aug

Trading platform risk and onboarding — summit

Refactored the guard/protection system into a universal catalogue; added account-wide loss budgeting and strategy-level timing overrides; built risk slider onboarding and Telegram-based sign-in flow.

Distributed agent worker tooling — agent-harness

Built a macOS personal agent with UI tree reading, screenshot capture, device control, and Screen Recording permissions—runs as a login agent.

2026 Jul

Price prediction model productionization — crypto-model-research

Forward-tested and validated a 13-feature champion model achieving 77-90% WR; exported the Split-MoE ensemble to ONNX for integration with Summit.

File tagging utility for Windows Explorer — intag2

Added Vorbis comment writing for .ogg/.oga/.opus files; fixed silent metadata write failures and shell extension uninstall paths; collapsed CI into single workflow and bumped version to 2.5.

2026 Jun

CV generation pipeline automation — jamminroot

Revised the CV-generation pipeline with first-person voice enforcement, LLM model override support, and improved PDF output with skills section and role breakdowns.

Lightweight input automation tool — jolt

Built a minimal AutoHotKey alternative with a scenario engine, rule-based conditions, stateless themes, sound actions, and Interception support for input gate.

2026 May

Firmware variants for ESP32-S3 — j-uni-hid

Pushed v13 firmware with fire-and-forget USB HID events and 8x8 matrix variant; fixed DC disconnection and added graceful COM restart for the dual-core v12 release.

Windows input filter driver — input-driver

Released v1.2.2 of the KMDF input driver with an integration-test runner, push-style event delivery API, and SDDL relaxation for Interactive Users.

Multi-engine Android TTS app — j-tts-android

Added pitch and speed sliders, question/exclamation intonation control, wired Vosk + Silero with endpoint quality tuning, and integrated TeraTTS and Piper engines with Kotlin G2P.

2026 Apr

E-ink reader custom firmware — papyrix

Added Knowledge Base, Map app, and FB2 encoding support to the Papyrix fork; optimized map rendering for Apple Silicon and built tile and book processing scripts.

VR aim-assist and overlay tool — MEMU3

Reworked the aim-assist module with YOLO confidence thresholds, DirectML GPU inference, and USB-HID fallback; rewrote overlay using D3D11 + DComp.

2026 Mar

LLM phone-use agent app — ozwil-android

Rewrote the sub-agent architecture with session-based delegation and tool execution; added model routing strategies, questionnaire-based setup wizard, and background service with wake detection.

Crypto price model experiments — crypto-model-research

Ran 11+ experiments including FFT frequency decomposition for MoE gates, snapshot ensembles, and variable selection—split up/down MoE gates became the new champion.

Knowledge base and map features for e-reader — papyrix

Added FB2 encoding support (windows-1251/KOI8-R), context menu for file deletion, and a landscape Map app with tile viewer and region selection.

2026 Feb

Windows file tagging utility v2 release — intag2

Prepared v2.4–2.5 releases with MS Store CI pipeline, CLI support, folder tag editing, and PDF context menu support; restructured CI workflows for manual triggering and auto-drafting releases.

Graph-powered code intelligence engine — jaxon

Added LSP integration for language-server-powered analysis, incremental index sync, expanded DI registration detection, and dead code analysis for C++, Go, Rust, and Svelte.

Neovim dotfiles and secret management — .dotfiles

Set up a full Neovim IDE configuration with LSP, Treesitter, Mason, and telescope; added pre-commit hooks for secret detection and SSH key management via chezmoi.

Telegram bot n8n node fixes — n8n-nodes-telepilot-2

Fixed auth race conditions, upgraded CI to n8n 2.8.3, and added a new album trigger for the Telegram pilot node.

2026 Jan

Firmware v11 for ESP32-S3 — j-uni-hid

Developed v11 firmware with self-reporting, configurable performance profiles, safe BLE pairing, and reduced heat via throttling; fixed Android reconnect and touch jitter issues.

Poker hand detection via computer vision — poker-cv

Built a CV pipeline for online poker platforms; achieved 99% hand detection and 97.8% board card accuracy with state recovery, log reconstruction, and validation metrics.

Telegram bot for Claude Code — n8n-nodes-claudecode

Migrated to the Claude Agent SDK, added Haiku model support, and fixed abort controller cleanup for the n8n Claude Code node.

2025

Trading bot monitoring and strategies — freqtrade-tg-multibot

Worked on a Telegram-based multi-bot monitoring dashboard for Freqtrade—improved authentication, daily profit calculations, and Docker/web deployment setup.

Telegram content collector and multi-target sending — pAssistant

Maintained a Telegram automation tool; added multi-target channel sending for separating memes and news, image deduplication, and summarization features for repost indices.

Auto-coding agent with git workflow automation — auto-claude

Built an autonomous multi-session AI coding agent; implemented squash merging, git rules system, task ID tracking, and completion detection across worktrees.

Trading strategies development and optimization — freqtrade_startegies

Developed multiple cryptocurrency trading strategies (EwoDip15m series, PackRelReversion15m, BtcRelReversion15m) with backtesting and forward-test results achieving 73-78% win rates.

2024

Telegram bot foundations and refactoring — pAssistant

Continued maintenance on the Telegram assistant bot—added content forwarding fixes, session state handling, and minor refactoring across the pipeline.

Experience

Tech Lead

Sep 2024 – Present · 1 yr 11 mos

Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer

Oct 2023 – Aug 2024 · 10 mos

Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer

Jun 2021 – Sep 2023 · 2 yrs 3 mos

Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer

Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia

Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer

Sep 2018 – Feb 2019 · 5 mos
United States (remote)

ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer

Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia

Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer

Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#

SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++

Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C

Windows input filter and injection driver similar to Interception.

crypto-model-research · Python

R&D project for crypto price prediction models.

poker-cv · Python

Computer vision experiments for online poker platforms.

intag2 · C++

Assign tags to files and folders in Windows Explorer.

j-tts-android · Kotlin

Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin

LLM-powered Android assistant with phone control capabilities.

freqtrade-tg-multibot · C#

Multi-bot Telegram interface for Freqtrade with web dashboard.

jamminroot · TypeScript

A personal CV generator using LLMs to analyze work history and produce PDFs.

Last 12 months on GitHub: 4,603 contributions · 4,298 public commits · 89 PRs · 182 reviews. Generated 2026-08-17.
