

Dmitrii Chichuk (@Jamminroot)

36 y/o

Not a big fan of pigeons

Skills

Languages: C# / .NET · Kotlin · TypeScript / Node.js · Python · C / C++

Backend: ASP.NET · gRPC / Protobuf · WebSockets · PostgreSQL · Redis · high-throughput billing & metering · real-time event processing

Infrastructure: Kubernetes · Docker · GitHub Actions · GitLab CI · release engineering · S3

Data & observability: ClickHouse · Grafana · metrics & alerting design · analytics pipelines

Mobile & desktop: Android (Kotlin) · accessibility services · desktop applications · UI automation

AI & automation: LLM integrations · AI assistants with knowledge bases · computer vision · n8n / workflow automation

Leadership: team leadership (14 engineers) · architecture & system design · code review · mentoring · UX direction

Recent activity (last 12 months)

Auto-generated weekly from GitHub commit history · updated 2026-10-26

I built and refined Summit, a SaaS crypto algo trading platform with AI and neural network components, focusing on wallet-group management, LLM-based judge integration for quorum and sentiment, copy trading features, and backtesting infrastructure. I also developed j-uni-hid, a feature-rich firmware for ESP32-S3 that emulates mouse and keyboard over USB and BLE, iterating through multiple versions to improve reliability and add new capabilities. Additionally, I created input-driver, a Windows kernel-mode input filter driver with injection support, and built a comprehensive integration test suite.

In parallel, I conducted extensive research on crypto price prediction models in crypto-model-research, running systematic experiments with conformal prediction, drift monitoring, and model cataloging. I built agent-harness, an agentic worker framework in Rust that integrates with Mattermost and provides a schema-driven architecture for agents and integrations. I also worked on poker-cv, a computer vision pipeline for extracting hand history from poker platform videos, achieving high accuracy on card and action detection.

Other notable projects include intag2, a Windows Explorer file-tagging utility with support for multiple metadata formats; sunflower, a browser-in-a-browser infrastructure for secure remote browsing; j-tts-android, an Android TTS engine supporting multiple models and Russian language features; and ozwil-android, an on-device LLM app with phone use capabilities and sub-agent delegation. I also maintained various smaller projects like MEMU3, yolo-labeler, and dotfiles.

Activity timeline (last 12 months)

2026 Oct

Wallet group and auth improvements on Summit — summit
Reworked wallet-group proposal execution and settlement, extended session persistence, and optimized the scanner to skip already-evaluated lanes.

YOLO labeler updates — yolo-labeler
Continued development on the personal YOLO labeling tool, adding validator features and general improvements.

2026 Sep

LLM judge and copy trading refinements on Summit — summit

Integrated LLM-based judge seats for quorum and sentiment, added TypeSafe System One provider, and fixed copy trading floor logic and wallet-group limits.

Intag2 tag writing and UI scaling — intag2
Extended file tagging support to Ogg, Matroska, and WebP formats, and added user zoom level and DPI-aware UI scaling.

Agent-harness Mattermost integration and schema — agent-harness
Built Mattermost connector and schema-driven agent architecture, enabling feed reading, sync, and tenant-based visibility.

Sunflower font management and browser lifecycle — sunflower
Improved font pack delivery and browser lifecycle management, fixing font build issues and adding automatic shutdown of idle browsers.

2026 Aug

Follows and rebalance features on Summit — summit
Built interactive exit simulator, trailing slider, and calm-liquidity basket for copy trading, and reworked rebalance logic with floor silencing.

Crypto model research and validation — crypto-model-research
Conducted systematic model cataloging, drift monitoring, and conformal prediction experiments, culminating in a benchmark freeze and validation response package.

Agent-harness core architecture and UI — agent-harness
Built the core agent framework with journal, reminders, private chats, and a web UI with admin page and settings.

Sunflower human input and deployment — sunflower
Implemented human-like movement planning, permission prompt handling, and deployment infrastructure with TLS termination.

2026 Jul

Intag2 release workflow and Vorbis support — intag2
Simplified the release pipeline, added Vorbis comment writing for Ogg formats, and fixed silent metadata write failures and uninstall path.

New trading strategies for Freqtrade — freqtrade_startegies
Developed and added several new pack-relative and BTC-relative reversion strategies for the Freqtrade bot.

2026 Jun

CV generation tooling improvements — jamminroot
Enhanced the automated CV generation pipeline with LLM model override, voice enforcement, and dry-run mode.

Jolt input automation tool — jolt
Developed a minimal AutoHotKey alternative with interception support, scenario engine, and condition-based rules.

2026 May

j-uni-hid v13 firmware updates — j-uni-hid
Released v13 of the ESP32-S3 HID firmware with fire-and-forget USB HID events and an 8x8 matrix variant.

Input-driver library and integration tests — input-driver
Added push-style event listener API, relaxed security descriptor, and built a comprehensive integration test suite for the Windows input filter driver.

j-tts-android engine overhaul — j-tts-android
Overhauled the Android TTS engine: added pitch and intonation controls, removed proprietary engines, and integrated new Russian voices with Piper and TeraTTS.

MEMU3 YOLO inference and mode changes — MEMU3
Refactored YOLO object detection to use DirectML, removed linger mode, and improved bow/flick tracking with bezier motion.

2026

Poker CV pipeline development — poker-cv
Built a computer vision pipeline for extracting hand history from poker platform videos, achieving high accuracy on card and action detection.

Ozwil Android LLM app with sub-agent delegation — ozwil-android
Developed an on-device LLM app with phone use capabilities, implementing sub-agent delegation, tool routing, and background service architecture.

MEMU3 aim assist and overlay development — MEMU3
Continued development on the mouse/keyboard emulation tool, adding YOLO-based aim assist, D3D11 overlay, and various mode improvements.

2025

j-uni-hid v10-v11 firmware iterations — j-uni-hid
Developed multiple firmware versions for ESP32-S3 HID emulation, adding BLE support, touch, and USB digitizer, with extensive debugging and optimization.

Auto-claude autonomous coding agent — auto-claude
Built an autonomous multi-session AI coding tool with squash merging, git rules system, and task management UI.

MEMU3 early development — MEMU3
Initial development of the mouse/keyboard emulation tool with USB HID rate limiting and aim assist integration.

Freqtrade monitoring app — freqtrade_monitor
Developed a Flutter mobile app for monitoring Freqtrade bot performance with charts and card UI.

2024

pAssistant Telegram bot development — pAssistant
Maintained and updated the personal Telegram assistant bot with summarization, forwarding, and logging features.

Experience

Tech Lead
Sep 2024 – Present · 2 yrs 1 mo
Deeplay · Full-time

- Lead a 14-person engineering team (7 developers, 2 reverse engineers, 2 L2 diagnostics experts, DevOps, 2 QA) building a real-time desktop application for intellectual/skill-based online games statistics and analytics; own architecture, roadmap, and the release pipeline shipping to 10+ target online platforms. Regularly drive cross-team efforts with analysts, technical writers, and project managers beyond my direct hierarchy.
- Led end-to-end development and launch of major product initiatives — a computer-vision pipeline, a desktop client, an agent/partner network, and several cloud-based services — owning architecture, core use scenarios, and UX direction. The desktop client drew 100+ organic access requests before any public announcement.
- Technically curated a series of product launches, each adding 5–30% to revenue.
- Single-handedly re-engineered the pricing mechanics of a billing system processing 0.5–1.5M operations per day; rolled it out to production with ~2 minutes of downtime and a seamless transition for clients.
- Shipped a customer-facing AI assistant backed by a curated knowledge base: account lifecycle, authentication, knowledge-base tooling, and failure alerting.
- Built the observability stack ingesting ~10M events/day: ClickHouse + Grafana metrics and alerting, messenger notifications, and internal diagnostic tools including screenshot-based remote debugging.
- Routinely build internal tooling that automates monotonous operational work — data converters with validation gates, log retrieval, admin UIs, and workflow integrations (n8n pipelines, custom hooks, Telegram/Mattermost clients).
- Primary quality gate for a codebase shipping ~50 PRs/month (250+ formal reviews on record); mentored 6 engineers end-to-end — several began onboarding newcomers themselves — before delegating day-to-day mentorship in 2025.
- Hands-on across the stack: C# / .NET backend, Kotlin Android companion app serving up to 2.5k DAU (including an accessibility-based input automation engine), CI/CD, dynamic server configuration.

Lead .NET Developer
Oct 2023 – Aug 2024 · 10 mos
Deeplay · Full-time

- Owned end-to-end backend feature delivery (C# / .NET); drove cross-component design decisions and stability work.
- Led a platform-wide migration of 10+ production integrations onto a new shared core in a single coordinated sweep.
- Owned release engineering for a 13-service fleet on Kubernetes — 350+ versioned production releases shipped over my tenure — including capacity management and credential/endpoint migrations across two product lines.
- Extended protocol-level integrations with new session modes, event types, and dynamic pricing flows.
- Standardised internal tooling and authored team-wide operational runbooks; mentored junior engineers.
- Continued maintenance of the Android companion app (Kotlin) and internal annotation frameworks.

Senior .NET Developer
Jun 2021 – Sep 2023 · 2 yrs 3 mos
Deeplay · Full-time

- Shipped backend features (C# / .NET) for a real-time desktop application for intellectual/skill-based online games statistics and analytics, supporting 10+ target online platforms.
- Engineered protocol-level platform integrations: transformed captured, decoded network traffic into consistent real-time session state with reconnect, recovery, and catch-up handling; took three integrations from empty repository to production, the largest — including a full secondary real-time subsystem — in ~6 months.
- Rolled out a shared rules-based classification engine across the entire integration fleet.
- Acted as de-facto release manager: coordinated hundreds of staged rollouts across test/stage/production environments on Kubernetes.
- Built and maintained the companion Android app (Kotlin): telemetry, CI/CD, dynamic server configuration, in-app updates.
- Authored internal frameworks including an image/video annotation tool for scaled rectangle previews — adopted across the team.
- Mentored junior engineers and wrote team onboarding documentation: workspace setup, conventions, operational runbooks.

Software Development Engineer
Mar 2019 – Oct 2021 · 2 yrs 7 mos
Ivanovo, Russia
Akvelon (vendor for Microsoft) · Full-time

- Developer in the Microsoft App Center SDK team
- Worked on .NET, Android, Apple, Cordova, Xamarin and React Native App Center SDKs

Developer
Sep 2018 – Feb 2019 · 5 mos
United States (remote)
ICVR · Full-time

- Built JetSetTV, an Android TV application, from scratch in a couple of months
- Worked on bug fixes and new features in Unity
- Set up CI/CD with Unity Cloud Build + GitLab
- Built a barebones REST API with ASP.NET

Full-stack Android developer
Jan 2016 – Apr 2018 · 2 yrs 3 mos
Arkhangelsk, Russia
Konstanta, LLC · Full-time

- Designed and built Android applications for clients across multiple verticals
- Worked with cross-functional teams; integrated third-party APIs; wrote unit tests
- Developed and deployed several b2b systems on 1C:Enterprise
- Built software for tracking Parkinson's disease patients (prescriptions, treatments, signs, test results) on 1C:Enterprise

Full-stack ERP developer
Konstanta, LLC · Full-time

Aug 2012 – Jan 2016 · 3 yrs 5 mos
Arkhangelsk, Russia

- Specified, customized and tested 1C ERP/CRM features for end users
- Authored help documentation; defined ERP design and coding standards
- Worked with end users to translate business processes into technical solutions

Selected projects

summit · C#
SaaS crypto algorithmic trading platform with AI and neural network components.

j-uni-hid · C++
Feature-rich mouse and keyboard emulation firmware for ESP32-S3.

input-driver · C
Windows input filter and injection driver similar to Interception.

crypto-model-research · Python
R&D project for crypto price prediction models.

agent-harness · Rust
Rust tool that controls macOS via UI tree and screen capture.

poker-cv · Python
Computer vision experiments for online poker platforms.

intag2 · C++
Assign tags to files and folders in Windows Explorer.

sunflower · Go
A Go-based tool that provides a browser interface inside another browser.

j-tts-android · Kotlin
Android TTS engine using Silero and phonetizers.

ozwil-android · Kotlin
LLM-powered Android assistant with phone control capabilities.

Last 12 months on GitHub: 5,422 contributions · 5,158 public commits · 63 PRs · 169 reviews. Generated 2026-10-26.
